NEWS IN BRIEF

Viewdata deal for CAP Sogeti

THE contract to implement France's electronic telephone directory project, which is planned to put all 34 million telephone subscribers on viewdata for free by 1992, has gone to software house CAP Sogeti. Honeywell Bull and Mita-TKT are to provide the hardware.

Hughes-ITT link

HUGHES Aircraft and ITT have set up a joint company called Tacom to develop terminals for use by the US forces in the joint tactical information distribution system planned for the mid-1980s. The system aims to provide secure voice and data communication using digital transmission techniques that are resistant to jamming or interception.

UN deal for IBM

IBM has won a UN Development Program contract for 16 4300s for collecting census data in China. Worth \$2.8 million, the contract is for a central 4341 at the Peking bureau of statistics and a network of 4300s, one in each of the 15 provinces of the People's Republic.

System X men out

OVER 2,000 System X development engineers have been suspended without pay by GEC Telecommunications at Coventry following a strike by six key men in pursuit of a pay claim by ASTMS of 22% plus other benefits. GEC has offered 17% with conditions including some shift work and the use of CAD.

MINICOMPUTER TOTAL

The world's most widely installed data base management system is used on DEC PDP/11 and VAX, HONEYWELL Level 6, PRIME, PERKIN ELMER-IBM System 34, GEC 4000 and ICL 2903/4/5 minicomputers.

'Amicable agreement' in copyright skirmish

AN "amicable and mutually satisfactory agreement" has been reached between Clive Sinclair, originator of the ZX80 "£100 computer" (CW, February 7), and Chris Cary of Compshop, who was prevented by a recent court order from marketing a cheaper copy of the machine, called MicroAce.

Sinclair is to get 5% royalty on sales of MicroAce, which is to be marketed only in the US in a kit form. The agreement also allows MicroAce to follow Sinclair's design more closely than at present.

Sinclair seemed to be satisfied with the outcome of the case under current British

copyright law. "We acted swiftly and correctly and it turned out well. We will not have our products copied, and that point has been effectively made."

The judge had prevented Compshop and Product Launch from promoting the MicroAce as the keyboard was similar to that of Sinclair's ZX80. Although the design inextricably linked the ROM and the keyboard, the ROM was ignored at the first hearing as being not immediately visible, and was in any case not identical to the ZX80 at byte level.

"We had a bit of a skirmish, which should

put people off copying ROMs," said Cary, "but it appears that ROM isn't copyrightable. Perhaps one day a law will be made, but we didn't want to be the British test case — it would have taken up too much time and money."

"At the end of the day we were just a couple of engineers trying to make a buck, not a pair of gangsters," he added, "so we came to an amicable agreement."

Although this particular skirmish is settled, the case is bound to add fuel to the controversy over software copyright.

Canadian chips from PO and GEC-Marconi

CANADIAN telecommunications manufacturer Mitel has licensed British Telecom (a part of the Post Office) and GEC-Marconi to make VLSI integrated circuits using its proprietary ISO-CMOS technology.

Plessey is also expected to take a licence on the technology. British Telecom is to develop prototype devices at its Martlesham Heath laboratory and establish, in consultation with industry standards for use in telecommunications and other systems.

Marconi and Plessey are to produce devices for their own consumption and for the world market.

ISO-CMOS is a technique which uses silicon dioxide instead of reverse biased P-N junctions to isolate transistors from each other in the complementary pair configuration of CMOS circuits. And polysilicon is used for transistor gates and electrical interconnections.

These two features increase transistor packing densities and allow devices to run at up to 50 megahertz while reducing power consumption.

They also allow both analogue and digital functions to be carried out on the same chip.

GEC research director Derek Roberts rates the technology the best available. GEC-Marconi is

Receiver called in by Nascom creditor

AFTER failing to find alternative backers, or to persuade Grove-wood Securities to increase the £500,000 loan it made last year, Nascom Microcomputers has asked Grove-wood, its major creditor, to call in a receiver.

Nascom attributes its failure to slow recovery of development costs and delays in the supply of components.

A spokesman for W. H. Cork

Gully, who have been appointed receivers, said it was too early to say why Nascom had run into trouble, but the company was

continuing to trade and was still selling products.

There were no redundancies

and prospects of finding a buyer were good, he said.

The committee of the International Nascom Microcomputer Club, the user group that was run with secretarial support from the company, have all resigned, but committee members hope to continue to produce the INMC newsletter and to resume their functions if support becomes available from whoever buys the company.

Wanted—16,000 DP staff

A NATIONAL focus of responsibility for training computer staff and forecasting manpower needs in the industry, preferably based on the Engineering Industry Training Board, is essential if economic development is not to be held up by shortage of computer staff. That is the main recommendation of the Manpower Sub-committee of the Neddy Computer Sector Working Party which has now

produced its final report after three years' discussion.

An investigation commissioned by the sub-committee reveals that there is now a shortage of 16,000 analysts and programmers and 6,000 electronic and control engineers in the UK. This does not allow for the "multiplier effect" that economic development in the country as a whole has been "significantly held back" by the shortage, and so otherwise the need for staff would have been even higher. About 500 programmers a month will continue to be needed.

The 6,000 engineering vacancies compares with the output figure of 2,000 a year coming from the colleges and universities.

Other recommendations the sub-committee makes include: Expansion of computer education, both general and vocational, including boosting the initial programming and Real Time Programming schemes and the TOPS and Threshold programmes; increased taking on by employers of their existing staff for training (new technology agreements should help with this); further investigation of techniques to improve pro-

grammer productivity; increased co-ordination between Industry Training Boards.

Another recommendation is that selection procedures for trainees should be reviewed to avoid "qualification overkill". Sometimes degrees and other qualifications are demanded when they are not necessary.

The Engineering Industry Training Board needs to be enhanced, with its role extended, the sub-committee says.

The chairman of the sub-committee, Ian Benson of TASS, said that he did not think increased salaries in computing would alleviate the staff shortage much.

Freudian progress patient interview

AN interviewing system called Freud, developed on Cambridge Pet hardware at the University of London's Institute of Psychiatry, is taking a first approach to patient interviewing.

In design Freud differs considerably from Mickle, the National Physiological Laboratory by a team led by Dr Chris Evans (CW 1978). Where Mickle poses questions that are simply answered yes or no on the Freud gives a multiple choice menu designed to increase flexibility for doctors and patients.

The launch of Freud at the show in Wembley tomorrow (Friday) comes as a major organisation, Ables Infonet, is set up to sell the hi-tech challenge Mickle.

The new company, Mickle on SWTP hardware, £2,700 upwards, Freud, marketed by Medicom, the London-based medical systems specialists, cost £400 for software, runs on a standard Pet computer.

Interviewing by computer, which would replace areas such as personnel, insurance as well as medical, saves time and expertise ensuring that interviewers are not embarrassed or affected by the mood and presence of other person.

DIGICO COMPUTERS

the best intelligent terminal!

DIGICO's PLUG COMPATIBLE ICL 7502 REPLACEMENTS ARE UP TO 16 WEEKS DELIVERY

The DIGICO Advanced Telecommunications Processor (ATP) with 7502 software includes the following features:

- * Full local processing including Data Entry Pack
- * Local peripherals without reducing VDU capabilities
- * Simultaneous local processing and mainframe linking
- * Expansion to 2,000,000 bytes primary store
- * Expansion to 300,000,000 bytes disc store
- * Simultaneous multi-mainframe linking
- * Simultaneous batch and interactive linking
- * Full multi-programming/Executive operation

After 14 years of pioneering generations, DIGICO's ATP is now the most powerful processor of its kind in the world. This all British computer has over 100,000 lines of code and is growing at over 40% per annum.

FERRANTI

Briefing

TUC seeks deal with GBI

THE TUC is aiming to reach a joint agreement with the Confederation of British Industry over a policy to promote the advancement of technology.

There would be a joint public condemnation, the TUC hopes, of restrictive and deflationary policies which hold back development, and a call on governments to stimulate growth.

32-bit chip advance

SYSTEMS Engineering Laboratories has announced what is said to be the industry's first true 32-bit word super minicomputer based on a single slot central processor. Called the Concept/32 the machine also incorporates a single slot I/O processor and a single slot memory board called the Integrated Memory Module (IMM) which holds 256K-bytes of MOS memory.

Univac gets vote

AN ORDER worth £1.5 million has been placed with Univac by Merseyside County Council for an 1100/81 system with online and real time facilities to replace an ICL 1904S. Database and distributed communications applications are planned. ICL, IBM and Honeywell all competed for the contract.

FBI probe at IBM

AN IBM employee, a computer and more than \$100,000 are involved in an FBI investigation at IBM's offices in Springfield, Missouri. IBM confirms the investigation but will say no more, and the FBI describes the case as "routine robbery."

ICL bids for share of world PC market

WITH the aim of becoming a major world-wide supplier of multi-layer printed circuit boards, ICL has launched a new marketing operation to exploit the capabilities of its highly productive multi-layer PC board manufacturing operations at Plymouth, Manchester and Kidsgrove, Staffs.

ICL claims that it now has more than 80% of the fine line multi-layer PC board production in the UK and has set up an operational division called ICL Logiclayer within its manufacturing group to handle the manufacture of all PC boards for its own computers as well as for outside customers.

Personnel include 900 staff and a marketing team which has already picked up orders worth

\$400,000 from outside customers. Outside business is expected to be worth £5 million by 1982.

ICL says that multi-layer boards now account for 90% of its PC board production and that the most complex boards now contain up to 22 individual layers.

\$1,800 million damages against AT&T

MCI Communications Corp has won record punitive damages of \$1,800 million against AT&T for allegedly impeding its growth between 1971 and 1975. MCI provides a cut-price long-distance telephone service based on microwave links, but depends on AT&T's local network to reach its customers.

In 1971 the Supreme Court ordered AT&T to provide links to MCI plant, but MCI claims that AT&T often refused to provide them or was uncooperative. AT&T says it will appeal the decision.

Bradford backing

BRADFORD: Metropolitan Council is backing a microprocessor power supply manufacturer, Microvitec, in a project for building microcomputers and display terminals. Bradford has set aside £500,000 worth of buildings and land for Microvitec which plans to have 300 staff within two years.

Infoline deal

AGREEMENT has been reached on the takeover of Infoline, the online information service, by Pergamon Press (CW, June 12). The purchase will provide Infoline with £500,000 injection of two of the existing shareholders, the Department of Industry and Darwent Publications are to withdraw.

Martlesham Medal for 'Colossus'

DESIGNER of Colossus, Dr Tommy Flowers, has been awarded the first Martlesham Medal, instituted by British Telecom to reward outstanding contributions to telecommunications development.

In 1943 Flowers built the Colossus code-breaking machine which is now generally recognised as being one of the first computers. It was programmable

via a bank of switches and used 2,400 thermionic valves.

At the presentation Flowers, now 74, met the maker of the machine whose code he helped to break, Boris Hagelin, a Russian-born Swede, now 88, designed the Hagelin code-making machine, which had been built in Sweden since 1934, and ended up being used by both sides during the war.

As a research worker at the Post Office's Dollis Hill laboratory, Flowers had made his expertise in switching available to the government's Bletchley Park Communications Headquarters.

Dr Flowers is pictured receiving the first Martlesham Medal from Sir William Barlow (centre). On the right is Boris Hagelin.

303X boost to delay H-series

ANNOUNCING substantial enhancements to the 303X line, as forecast in Computer Weekly last week, IBM has given a strong indication that the H-series launch has been put back to some time next year. The announcements include the large-scale Coronado disc drive, now called the 3380, and new releases of MVS supporting up to 32 megabytes on 3033 multi-processor configurations. The previous maximum was 16 megabytes.

Most striking feature of the announcements is the long lead times: the 3380 disc drive is set for September 1981, the new release of MVS for January 1981, extended addressing on 3033M for December 1981, and the speed matching buffer for attachment of 3380 discs to 370/158s and 168s will not be available until spring 1982.

Andahil has responded to the 32 megabyte memory limit by saying that its V/7 and V/8 models were designed for more than 32 megabytes, and that a 32 megabyte 470V/8 is already running in Sunnyvale.

Other items in the IBM announcement are a 3375 800 megabyte disc drive, and a 3814 controller which allows up to four peripheral controllers to be switched between up to eight channels or vice versa. The 3814 is said to allow more efficient management of large installations.

The announcement also includes a new model of the 3042 Attached Processor for 3033 installations. Previously APs have made use of the main processor functions.

Change of plan for Inmos denied

THERE seems to be little chance of Industry Minister Sir Keith Joseph or Mrs Thatcher reaching any decision on the future of Inmos this week. Suggestions that the company may be persuaded to change its plan to set up its first UK factory at Bristol and move across the Severn to South Wales, have been denied. Meanwhile the review of the project now being carried out by the National Enterprise Board is said to be "routine". It considers that as it

first approved the grant of a second £25 million for Inmos six months ago, and as the government has not yet acted on that recommendation, it is necessary to take a further look at the company.

There is at present no indication that the board is likely to change its view, but for its part Inmos is now preparing plans for the next year and for five years ahead, and is taking into

New from Cifer... the 2600 range

Introducing the British designed and built 2600 range of Visual Display Units. This comprehensive range starts with a series of 'Dumb' Terminals through to highly intelligent Disc Based Units. Featured below is the 2632.

Model 2632

- Local input and editing of screen based data.
- Selection of visibility conspicuous protected fields.
- Buffered transmission of input or edited data.
- User's accessible status line.
- Over 130 command functions!

For further information on the complete 2600 range contact Cifer today

Computer Weekly has a circulation each week of over 90,000 including the highest fully requested circulation in the UK.

Computer Weekly is a weekly magazine for the computer industry. It contains news, features, advertisements, and a classified section. It is published by the Computer Press Ltd. The magazine is available in both print and microfilm formats. The print version is published weekly, while the microfilm version is published quarterly. The magazine is a valuable resource for anyone involved in the computer industry.

COMPUTERVIEW

DR GENE AMDAHL's thesis that the mainstream computer business of the near future will live in an IBM software world, regardless of who supplies the hardware, looks like coming true even faster than he imagined. A quiet revolution is taking place in the IBM compatible business, one that has crept up almost unnoticed.

Companies are no longer satisfied simply to sell IBM compatible hardware and rely on the fact that most IBM system software is in the public domain to acquire the essential operating systems and utilities. Three companies are now selling or planning to sell systems complete with compatible or near compatible operating systems.

Siemens pioneered the approach with the large Fujitsu systems which it markets in West Germany and several other European countries as the 7800 line. These machines are offered with the BS3000 operating system which is Fujitsu's OSIV/FA, which matches IBM's MVS and is claimed to be 99% compatible and between 10% and 20% more efficient.

Siemens' compatriot, Nixdorf, plans to follow suit with plug-compatible hardware and "super-DOS" operating systems from its new US acquisition, the Software Company of Richmond, Virginia. The pitch is that users are offered full compatibility to run their existing software without the risk that IBM will pull the rug out from under them by changing the software pricing rules.

The third such venture will come from the new

The quiet revolution

TRW-Fujitsu company in the US which plans to sell Fujitsu mainframes, ranging from the M-130F to M-160F with the OSIV/FA operating system which is said to be about 80% compatible with DOS/VS. Since the machines are built in 370 architecture, increasing the compatibility will not be an insuperable problem, at which point a third full alternative will be available to IBM users.

Already, IBM software rules the developed computer world with more than 50% of almost all major markets apart from the UK, France and Japan. But even in Japan, IBM software and its derivatives and copies reign supreme, since IBM, Fujitsu and Hitachi together have well over 60% there.

Dr Amdahl's thesis is that all computer manufacturers will eventually have to follow the IBM path, and the latest generation of machines from ICL, Honeywell and CII-Honeywell Bull indicate that all three are clearly keeping their options open, since the mid-range 2900s, the DPS-8 and the DPS-7 are all microcoded machines

which could be adapted fairly cheaply to run IBM software.

Univac's 90 series VS/9 machines and Siemens' 7000 series are both based at second-hand on IBM 360 architecture. The viable real alternatives in the medium and large-scale operating system world are ICL's VME/B and if it ever really takes off VME/K, Univac's OS/1100, Honeywell's GCOS-8, NCR's VRX and Burroughs' MCP. All look viable and competitive today. Whether they will do so in 1985 once the rising tide of IBM lookalikes reaches full spate is open to question.

The unfortunate aspect of the Amdahl theme is that many people believe that the IBM software standard is a very inferior one, and that it is vital that there should be real alternatives. Amdahl Corp has led the way in offering software enhancements which improve the performance of major IBM offerings such as VM/370 and IMS, while by rewriting MVS, Fujitsu has proved that it can be made to run significantly more efficiently.

The latest development is by no means good news for IBM itself, because by offering machines which are compatible with but not dependent on IBM software, Siemens and Nixdorf are making it much less attractive for IBM to change the rules, either by changing its licensing conditions or by introducing incompatible "nasties" in future operating system releases. To do so the standard plug-compatible bolt-hole.

As Dr Gene Amdahl says in his most recent interview with Computer Weekly, it really looks as if IBM's hegemony is over (see page 9).

LETTERS to the EDITOR

Gilb's 'Blinkerthink' on human factors

I YIELD to no-one in my admiration for Tom Gilb, but the Mythology headed "Towards a natural menu-driven language" (CW, April 17) did seem to me to exemplify a vice all too prevalent among writers and speakers on human factors in computing.

The vice in question might be called Blinkerthink: it consists in ignoring all work on the subject done outside one particular establishment or research group.

Gilb was at least being somebody else's trumpet, but it is really sensible to discuss "behavioural Studies of the Programming Process" without any reference to the work of Max Sime at Sheffield, Tom Green at

Cambridge, Brian Shackel, Ken Eason and their team at Loughborough, Mike Coombs at Liverpool, Ben Shneiderman and John Gannon at Maryland, Ed Youngs at Bell, David Embley at Illinois... etc. etc. ? Admittedly, it would be difficult to do justice to all this work in a single article, but some of it is very relevant to assessing the merits of the IBM work. Surely it would have been possible at least to mention its existence, so as to alert the reader to the fact that Yorktown Heights is not the only place where such expertise is to be found!

Julian Newman
Heriot-Watt University,
Edinburgh.

Modifications of code during execution of the program

I WOULD like to contend Professor Donald Michie's statement concerning the "conscious absence from all but a couple of experimental artificial intelligence languages of facilities for operating on code as data" (Privateview operating March 20).

One Anal standard language, Mumps, available commercially on a variety of minicomputers, incorporates facilities specifically intended to permit modifications of code during the execution of the program.

The principal command used for this purpose is XECUTE, which operates on a string of data, interpreting it as Mumps code. The code/data strings may be created and modified by the programs. In some, if not all versions, the argument of the XECUTE command may modify, or even completely delete, the program invoking it. Using the code-modifying facilities of Mumps I have produced an interactive system to analyse highly complex information held on a database. The system interprets commands entered by the user and from these builds logic-optimised routines to analyse the database, displaying the results on the

user's terminal.

My purpose in using these techniques was to optimise the computation time and main memory usages. Nonetheless I believe these facilities and the extremely powerful data structures available under Mumps could readily be exploited for the purposes of artificial intelligence.

J. I. SANDER
Stephen Howe Consultants,
New Malden,
Surrey.

I stand corrected by Mr Sander's communication, in which I am sure other readers will be interested. - DONALD MICHIE.

THE EDITOR welcomes letters commenting on subjects published in Computer Weekly, or on original topics. All letters must be accompanied by the writer's name and address, not necessarily for publication.

GOVERNMENT COMPUTER REQUIREMENTS

MINISTRY OF DEFENCE
METEOROLOGICAL OFFICE
BLACKBURN.

A telecommunications Computer for connection to an IBM 370/158 and an IBM 380/108 to support an existing terminal network is required in late 1980.

MINISTRY OF DEFENCE
METEOROLOGICAL OFFICE
RAF CROFTON.

The Meteorological Research Unit at RAF CROFTON (near Bedford) requires a multi-processor computer system to provide a remote job only facility in the main. The computer system (IBM 370/158 or 380/108) is to be connected to a local job only facility via a 300 baud line.

Applications for copies of the Government Requirements should be sent to the CENTRAL COMPUTER AND TELECOMMUNICATIONS AGENCY, 10, Whitehall, London SW1A 2BQ. Closing date: 15th July 1980.

The requirements are for a computer system capable of supporting a minimum of 100 terminals, with a minimum of 100,000 characters of storage, and a minimum of 100,000 characters of storage.

The requirements are for a computer system capable of supporting a minimum of 100 terminals, with a minimum of 100,000 characters of storage, and a minimum of 100,000 characters of storage.

EEC wants comms net to sea ports

A DEADLINE of June 28 has been given for applications to tender for a pilot data communications network linking seven EEC sea ports. The pilot scheme is being organised by the European Ports Data Processing Association, the independent organisation part funded by the EEC Commission and based at Antwerp.

NEWS IN BRIEF

Fujitsu buys WP division

BY far the most ambitious of the six Japanese computer companies, Fujitsu has staked its claim for a share of the world word processing market by buying the word processing division of US leasing company DPF Inc. DPF has been selling word processing software with large second-hand IBM 360 and 370 processors with a minimum of 10 and no maximum limit to the number of terminals attached (CW, August 3, 1978).

Fujitsu already sells some of its peripherals OEM in the US, and is putting together a 50-50 joint venture company with TRW to market smaller mainframes and business computers.

Harris for college

HARRIS has won a £175,000 order from Slough College of Higher Education for a 550 mini to replace an ICL 1903 batch machine. The system will have 37 VDUs as well as links to existing micros and is the second Harris order to replace ICL at a college, following that from Lancaster Polytechnic (CW, December 6 1979).

37% pay claim

The Post Office Engineering Union has voted at its national conference to pursue a pay claim of 30% plus 7% for productivity. British Telecom has offered 15% plus 2% for productivity.

£1.6m contract

A DUAL ICL 2972 system worth £1,600,000 is to be supplied to Edinburgh Regional Computing Centre to replace a 2970 and two System 4.76s. Edinburgh's own home-grown multi-access system, EMAS, will be used on the new equipment, supporting 170 terminals, almost twice as many as at present.

Intel chief tells UK how to get electronic mail

IF the UK government wanted to stimulate a productive electronics industry, it should take British Telecom and the relevant private companies and knock their heads together until an integrated and economic electronic mail system emerged. So said Intel president Andrew Grove last week when he commented on his firm's future. He expected Intel to keep up the 20 to 25% a year pre-tax profit, it had enjoyed since 1977.

Turnover rose 65% from \$400 million in 1978 to \$663 million last year and was on course for reaching \$820 million this year. Research and development spending ran at a steady 10 to 15% of turnover and the size of production premises had quadrupled in the last four years, reflecting not just greater volume but process complexity increasing to match device complexity. Current designs incorporated around 100,000 transistors per chip and the upward trend

Extel's business micro

EXTEL has introduced a commercial microcomputer system, the System 20, which runs under the CP/M operating system and costs £4,650 for the smallest configuration. It is built in the US by Digital Microsystems of Oakland, California and supercedes Extel's System 10, otherwise known as the Microfile.

Extel says compatibility with System 10 can be retained using the M-Basic developed by Microsoft of Washington DC which is available in the UK from the Computer Centre of Swansea. Claude packages, sold with System 20, have been adapted for the System 20. It comes with at least 64K bytes of main memory, two floppy disc drives and can be expanded with hard discs of 13.7 or 27.4 megabytes.

This contradicts the earlier comment from Grove's co-director, Intel chairman Gordon Moore, that increasing the complexity of devices would reduce the number of application areas for them (CW, January 31). But Grove said future systems would have yet wider applications because Intel's architecture would reduce the cost of applying the system to the user's problem.

Intel's product philosophy for the Eighties would be based on integrating further parts of computer system architecture into the same device - up to operating systems and high level languages. A product designed on these lines would become available within a year. One such product was called the IAPX432. Intel was not considering using gallium arsenide or Josephson Junctions, Grove said, just silicon and a few garnets (for bubble memories).

Dogs banned at Pet show!

OVER 100 systems, each showing a variety of packages, demonstrated the wealth of "micro-talent" among UK Pet users at the world's first Pet Show at the Cafe Royal, London, last week.

Hardy, are launched included the 8032 Superpet. Commodore's new machine with an 80 column display, and the 8050 1 megabyte dual drive floppy disc.

Another hardware breakthrough on show was the Mupet multi-user system developed by BMB Compulsance of Ontario, which allows up to eight Pets of any generation to run off one disc drive. There is a potentially huge market for multi-user Pets and the Canadian company is already negotiating with UK dealers eager to sell Mupet here.

Software on display included Commodore's new Pascal from UK firm Trans Am, games written by primary school children, medical assessment programs written by doctors, and a variety of business tools and ready-made systems, many of which originated from home users out to solve their own problems.

Encouraged by the success of the Pet in Europe, Commodore International is buying a factory from AEG Telefunken at Brunswick, near Frankfurt, to spearhead Pet production in Europe. In the UK alone, sales of the Pet have exceeded 20,000.

Motion Message

Advertising • Staging • Special Effects • Promotion

Organising the Pet Show held hidden hazards for Ilona Uhl of Business Image. She was inundated with calls from ladies eager to enter their puppies in the show, presumably thinking that peripherals involved leads of the leather variety. As a concession to disappointed pet lovers the show featured a famous Old English Sheepdog which helped four-year-old Antonia Salmon to open the show.

Video disc player links forged

SANYO has joined Japanese companies Sharp, Sony and Trio Kenwood in acquiring a licence from Philips to make and sell the video disc player developed jointly by Philips and MCA. Philips is test marketing the player and expects to sell it nationwide in the US by the end of the year at \$775.

RCA plans to enter the market early next year.

GOLDATA of Reading has signed an agreement worth \$250,000 a year with the Data Printer Corp of Malden, Massachusetts.

MICRO NEWS

Intel plans its next generation

THE key issue of this era is the silicon system and the next generation is likely to be extremely innovative in systems technology. No longer is it the case of programmers writing software to support hardware but during the last few years it has become increasingly apparent that engineers are designing hardware to support the software.

These opinions were aired by Dr Colin Crook, managing director of Rank Precision Industries, at this year's Semtex held at Imperial College. Now they appear to be holding true — Intel has announced its Micro-system 80.

Intel has combined its announcements for the future, previously called "Operation Crush", with a renumbering of its existing chips and systems. The result, Micro-system 80, projects a hierarchy comprising five levels of functionality from 8-bit to 32-bit.

In order of decreasing levels of systems integration they are: A 32-bit micromainframe called IAPX 432 and previously referred to as the 8800 (CW, March 8); a 16/32 bit micromini called IAPX 286; two 16-bit microminis called IAPX 188 and IAPX 86; three 8/16-bit microcomputers called IAPX 88, MCS-85 and MCS-80; and two 8-bit microcontrollers called MCS-51 and MCS-48.

The micromainframe is Intel's

solution to the distributed processing problem and is said to have the power of an IBM System 38. It is described by Intel as "a 32-bit microsystem offering mainframe functionality and performance within a micro-computer form factor."

The 432 is said to open a technological concept, that of hardware and software integration within a package which displays system characteristics. It is an object oriented machine which, according to Tom Lawrence, Intel's vice-president for Europe, means that the data set is at a higher level than the bit or byte definition.

"An object is a data set which could be a microprocessor itself or a memory management unit," says Lawrence.

System operation is based around a modular software structure. The system commands its internal structure to define an object like a file management system or floating point arithmetic logic unit and any module within the system can take on that object.

Programming has been made simpler by the use of Intel's own systems implementation language, SIL, which is register independent. Other languages are to be supported, but the only one announced so far is Pascal.

More details of the 432, and the rest of Microsystem 80 are to be announced at the Intel Fair on June 24. Meanwhile it is

thought that the system will have an extensive addressing range of 4,000 megabytes (2²²) which will support from 256K to 8 megabytes. Intel hopes to provide limited quantities of the 432 towards the end of this year.

Lawrence defined the micro-main as a 16-bit system with increased functional capability. It involves advanced integration of hardware and software so that the system possesses its own DMA channel and the kernel of an operating system. The micromini is a 16-bit system without functional integration, but with co-processor operation.

The IAPX 286 basic comprises a CPU, an I/O processor, a numeric processor extension and operating system firmware. From this a complete family of 286/xx systems evolve with differing combinations of the four basic units. They all use ASM and PLM system languages and Pascal and Fortran applications languages.

The IAPX 188 appears to be an enhanced extension of the 88 and 86 systems and is code compatible with them for certain applications such as personal computers, word processors, intelligent terminals and controllers. It also has operating system firmware support.

Three units comprise the IAPX 86: the 8086 general data processor; the 8089 I/O processor; and the 8087 numeric processor extension. Again, all

LAWRENCE... An object is a data set which could be a microprocessor itself or a memory management unit.

combinations of these constitute the 86/xx family, and likewise with the IAPX 88. Key architectural features of both families include one megabyte address space, co-processor extensions, 16-bit internal data path and hardware multiply and divide.

Both micromini systems, IAPX 188 and IAPX 86 use ASM and PLM 86 system languages and Pascal and Fortran applications languages. The microcomputers, including the IAPX 88, use ASM 80 and PLM 80 systems languages and four applications languages, Pascal 80, Fortran 80, Cobol 80 and Basic 80.

Meanwhile, Intel has plans for Europe. A 13-acre site with a 100,000 sq ft building, in Swindon, Wiltshire, is to become the UK headquarters. According to Lawrence, major activities will be carried out there including some international functions. The company is also interested in setting up a plant in Eire.

Announcements will be made on July 14, Bastille Day, on whether Intel will be venturing in France with Matra-Harris.

Intelligent peripheral controller first in latest range of 68000 devices

DETAILS of more devices in the 68000 family have been announced by Motorola and are expected to be available over the next two years.

An intelligent peripheral controller, called the MC 68120 and due for sampling in autumn, will be the first available. It has a 8001 8/16-bit processor on board, an enlarged instruction set, 2K-bytes of ROM, 21 I/O lines, a serial communications interface, 128 bytes of RAM and a 16-bit counter. A typical application is an asynchronous printer controller.

Also due for sampling in the autumn are the MC 68122 terminal node controller for supervising peripherals and the MC 68540 error detection and correction chip. The 68540 will carry out double bit error detection in 16-bit data and can be cascaded for 32-bit data.

Due for sampling in spring 1981 is the 68401 memory management unit which will support virtual memory and real memory up to 16 megabytes, and perform address translation. Samples of the 68230 parallel interface timer are expected in summer, 1981. This will handle I/O interrupts and generate synchronous pulses.

A direct memory access controller is planned for sampling in summer, 1981. Designated MC 68450, it is built around the 68000 and will have a transfer rate of 4 megabytes/second. Hitachi is developing it in a technology agreement with Motorola.

Two other chips are expected to be sampled in 1981. The first, 68561, is a communications controller which will handle SGLC, HGLC, bisync and X25 communications protocols. The second, 68341, is a ROM programmed for floating point operation.

Motorola is considering the development of four other peripheral chips including double port RAM, the 68340, a bubble memory controller, the 68453 (which Rockwell will develop under its agreement with the company), a direct memory access processor in the 68540 series, and disc controller, the 68454.

Motorola is delivering the US 4MHz versions of the 68000, but 8MHz versions are expected in the autumn.

1980 edition of IC Master

THE 1980 edition of the IC Master was introduced at this year's All Electronics Show. It costs £52.50 from Peterson Steadman and Partners, 34 High Street, Saffron Walden, Essex.

New shop opens

PET dealer DaVinci Computer has expanded into new shop premises at 65 Edgware High Street, Middx. Tel: 01-853 0836.

ICL plans to boost its US turnover tenfold

BEHIND ICL's radical reorganisation of its US business (CW, January 31) lies an ambitious plan to boost turnover there from its present meagre \$18 million to about \$200 million in five years.

Main thrust of the market drive continues to be the products inherited from Singer and developed further by ICL, notably the 9500 point-of-sale terminal, which has scored an order for between 400 and 500 terminals with 40 System Ten controllers from an unnamed US cus-

tomers.

The new System Ten 120 was launched with different peripherals in the US as the System Ten 320, and the company is now selling these products, and the 1500 terminal computer, from its new distributive systems division based at Irving, near Dallas, Texas.

Headquarters of its sales operations for native ICL products is now Falls Church, Virginia, close to Washington. The advanced systems division is selling the

2950s and 2956 to existing customers who have outgrown their 2903/4 machines and want to run the DME/2 emulator, and large 2900s with the back-end Distributed Array Processor. Target market for these is the oil industry, research establishments and colleges, and bodies doing image processing.

The 2903/4 machines have been sold for about five years in the New York area, and along the Boston-Washington "corridor". Installations, including a couple of

customers who have upgraded to 2950s, still only number about 20. Over 30 have been sold in Canada.

The ME29 replacement for the 2903 series was launched in New York last week and has been introduced in Canada.

A third division, customer service, remains at the former ICL Inc headquarters at East Brunswick, New Jersey. It will be responsible for maintenance and service on all products sold by both marketing divisions.

'Data and voice networks will develop separately'

—US PROFESSOR TELLS INFOTECH SEMINAR

DATA networks will develop separately from voice networks in the Eighties and will use satellites almost exclusively. Voice networks will make little use of satellites, even though users can quickly adjust to the worst feature of satellite voice links — the quarter-second delay.

These are the views of Dr Norman Abramson, of the University of Hawaii, who conducted an Infotech seminar in

London on Satellite Data Communications.

His opinion on the separate development of the two types of network echoes that of Donald Davies, of the National Physical Laboratory, expressed at a conference last year, but it flies in the face of British Telecom's plans for the integrated services

digital network based on System X.

The separation was particularly likely to happen in Europe, Abramson said, because the difficulties of sending data via voice lines were greater than in the US. British Telecom is known to be taking a close interest in satellites, but it expects their operation to be a PTT monopoly throughout Europe.

Abramson said the evidence to support his assertion could be seen in the number of satellite data networks planned in the US: SBS by IBM and partners, Xten by Xerox, SDX by Continental Telephone, and Dynac by Digital Computer Corp.

GTE Teletel planned to use satellites in its existing packet network by 1982, and every major US data network operator

was planning to use satellites.

The rationale behind the heavy use of satellites lay in two main factors. One was the "connectivity" provided by a satellite network: any station could call any other station directly, without complex hop-by-hop connection paths.

The other was that costs were falling so rapidly that satellite capacity now cost only \$400 a year per channel, which could be virtually ignored. Ground stations, too, had fallen from \$3 million for a system based on a 30 metre dish antenna in 1965 to \$37,000 for a five metre dish-based system in Alaska in 1978. This was also the price at which Texas department store Nieman Marcus had last Christmas entered a receive-only ground station in its mail order catalogue.

Many amateurs, however, were now receiving over 40 television channels from the cable television companies' distribution system on ground stations costing from \$15,000 to only \$2,000.

Ground stations in use with US domestic satellite systems had grown from 800 in 1978 to 2,000 last year, and 4,000 were expected to be in use by December. Holiday Inns alone were planning to install 200 a year for several years.

Turnover 10% ahead of plan at Univac

WITH turnover 10% ahead of plan and orders 20% up, Univac's UK subsidiary closed its books on a satisfactory year which ended March 31.

Previewing the results, managing director Bill Read reported that the 1100/760 bit-slice mainframe had been particularly successful, with 15 orders in the UK, 76 in Europe, and 228 worldwide.

The 1100 series, which consists of two current models, the 1100/80 and 1100/60, now accounts for two-thirds of Univac's business worldwide.

The other big seller for Univac in the past year had been the V77 minicomputer, which now accounts for 10% of its UK business. For 1980-81, the company plans to increase the growth rate of the minicomputer operations even further.

A major change is that sales of V77 minis to OEM systems builders for packaging as business systems is being handled by a new general services operation, GSO, which will also take in the 32/77 office computer, previously marketed by a dedicated sales force, and data base systems.

For the financial year, Univac UK has set itself an overall target of 30% growth in orders and 35% growth in turnover.

Supplies firms merge

COMPUTER supplies firms Cavendish King of Richmond, Surrey, and the Computer Supplies Company of Henlow, Bedfordshire, have merged to form an organisation that is expected to chalk up a turnover of more than £2.5 million in its first year.

Called Cavendish King & Computer Supplies, the new company will continue to operate from the existing offices of the two merged companies.

The Cavendish King side of the new firm is a marketing organisation which also provides magnetic media services.

Warning to West End shops

SHOPS in the West End of London have been warned that they could be breaking the Trade Descriptions Act by selling the Florida-made Bridge Challenger, an electronic card-playing game (CW, January 17).

The warning has come from Westminster Council trading standards office, which felt the £300 machine's advertising exaggerated its playing ability. The importer, Computer Games of Barking, is reconsidering the wording of its brochures.

Racal-Milgo first UK plant

THE first UK manufacturing plant for Racal-Milgo has been opened at a former Racal Communications plant at Chesford Grange, Warrington. The plant will employ, and probably add to, the 130 staff, and will build modems and add-on printed circuit boards.

Are you sure what's going on under the D.P. surface?

Sometimes you have a suspicion that things are not as they appear on the surface, but can't put your finger on the reason. With Computer Operations at the hub of your data processing activity, everything that occurs there can reflect significantly on your D.P. unit and even your Company. However, it can be difficult for you to take a detached view and be totally objective about the impression you create.

Dataskil can help.

Or perhaps you are in the throes of changing from one mainframe to another. Technical expertise, resources and organisation can come under strain, and users suffer.

Dataskil can help.

Or you're awaiting delivery of a new machine. Or trying to solve problems of staffing and procedures.

Dataskil Operations Services can help there too.

We can conduct a survey of your operations, activity, tailored to your exact needs. We can advise and help on resource control, organisation and staffing levels; salaries and recruitment; define standards; develop procedures; implement projects. And we can provide operations staff at all levels.

Take a fresh look — through our eyes.

Phone or return this coupon with your letterhead to South & West — Mike Windsor or Jeff Brooks, Dataskil Ltd, Reading Bridge House, Reading, Berkshire (Tel: Reading (0734) 581258). Midlands & North — Laurence Hobday, Dataskil Ltd, St Ann's House, Alderley Rd, Wilmslow, Cheshire (Tel: Wilmslow (0925) 532631). Please arrange an initial discussion without commitment. Please send your brochure. Please arrange a free one day operations appraisal.

Dataskil Ltd
The Computer Professionals

Question their judgement.

All Ventek computer users were once in the same predicament as yourself.

You have defined the need for a computer system for your company. What it needs to do. How it needs to do it. You're now at the next step.

Amassing a pile of information on computer systems. Checking hardware against hardware, claimed capabilities against actual capabilities. Seeing salesman after salesman. Comparing software costs, installation time, delivery dates.

Putting reputations and careers on the line. All to make the best possible decision in buying a computer system to help in the future profitability of your company.

Discover a Shared Aim

Ventek Computers would like you to meet Ventek Computer Users, so that you can quiz them on their purchasing decisions. Discover what the computer competition is all about. And most importantly, why there are 1800 installations in the

U.K., including some of the biggest names in industry, and why they went with Ventek.

This is not the time or the place Ventek Computer systems cannot be adequately described in an advertisement. Nor can any responsible business person decide on a computer system from a single leaflet or a quick briefing by a salesman.

So take this opportunity to see for yourself why Ventek Computers fit into so many organisations with so much compatibility and so little fuss.

An open invitation to discover our reputation

Take a step now to lessen the uncertainty of one of the most important buying decisions a company can ever take. Attach the coupon below to your card or letterhead and one of our highly experienced computer sales people will contact you; to arrange a business meeting with Ventek Users.

T-85 'just below power of Sigma 9'

THE Telefile T-85 plug-compatible replacement for the Xerox Sigma 9 has at last been unveiled. The company has also introduced its emulator for the Lockheed MAC minicomputer, which it calls the TCP-16/5, but its other emulation project, a replacement for the 24-bit GE 400, has been put on ice.

The T-85 is claimed to be just below the power of the Sigma 9, and two further models, a T-81 and a T-87, are planned.

Xerox introduced a multi-processor version of the CP-V operating system just before it pulled out of the computer business. The operating system is capable of running up to four processors, and Telefile has developed an enhanced interrupt scheduler which makes multi-processing configurations much more efficient: its target is to increase throughput by 80% with the addition of a second processor.

The first Telefile release of the software is to be called GOO,

and features a "red overflow" facility which gets round the problem that when a fixed head disc overloads, the system crashes. Instead, the system starts writing to a moving head disc.

Telefile is offering the new release, set for July 1, to existing Xerox users as well as customers for its T-85, and will be charging a licence fee for it. Up-to-date Cobol and Fortran have been added, and Telefile hopes to pick up a Pascal compiler developed at the University of Montreal.

The company has nine orders from the existing base so far, and in the UK Atkins Computing, now owned by On-Line Systems, and a long-time Xerox user, is keen to have a new machine.

Telefile hopes to win users for its T-85 from outside the Xerox base and is targeting the whole of the educational, time sharing and scientific markets. Enhancements planned include the addition of special back-end processors for things like fast For-

tran execution.

Reason for doing the Lockheed MAC emulation is that the company originally adopted the mini for use as a front-end processor for IBM 360 mainframes. Lockheed then dropped it after introducing the incompatible Sun mini. Telefile now offers the MAC emulation as a front-end for Sigmas and the T-85.

Both the T-85 and the TCP-16/5 use the AMD 2901 bit-slice microprocessor, eight in the T-85 CPU and four in the 16/5.

Amdahl software for IBM users

PROPRIETARY software, such as the MVS/SE Assist for 370/188 systems, is to be offered to IBM users by Amdahl (CW, June 29, 1979).

MVS/SE Assist is not yet included in the programme, which so far involves only the VM Performance Enhancement, VM/PE, and begins in the US in July. VM/PE enables one copy of

Japan's big slice of US market

UNDERLINING the increase being made by Japan into the US computer industry, Tokyo broker Okasan Securities says that Japanese companies have 42% of the US market for 16K RAMs and look set to get 80% of the 64K RAM market.

The brokers also say that world semiconductor production in 1979 amounted to \$10,500 million, with \$7,035 million coming from Japan, \$2,310 million from Japan and \$1,155 million from Europe. In 1980, the total was \$8 billion, with \$2.5 billion coming from the US, \$2.3 billion from Japan and \$.8 billion from the rest of the world.

Pertec will stay independent—Poppa

"AS a result of our acquisition by Triumph-Adler, we will be spending \$2.8 million more than we would otherwise have done this year on research and development, and \$5.2 million more on marketing."

This was the enthusiastic view of Ryal Poppa, founder and head of Pertec Computer Corp., acquired last year by Triumph-Adler using money from its ultimate parent, Volkswagen.

"Some European acquisitions have gone badly," he commented, naming no names, but making it clear that Triumph-Adler-Pertec was to be the exception. "The independence of Pertec will be preserved; there has been no backbiting and no jockeying for position."

The future of the combined company would be in office automation.

"We do not yet have the communications and switching technology, but we will either gain it through a joint venture or develop it ourselves. If you put Volkswagen, Triumph-Adler and Pertec together you are talking about a \$18,000 million company, which means that we are big enough to go into the semiconductor business in our own right. I'm not saying that we shall, but we can if we need to. And people may say that that \$18,000 million is overwhelming Volkswagen—all those little Beetles running about—but we will do a combined \$1,000 million in data processing this year."

Poppa revealed that Pertec plans to launch the new TA 1630 business computer in the US in

the next few months, and that because it was now available, Pertec had killed its own 16-bit development project to provide an upgrade path for the PCC 2000 business microcomputer. The PCC 2000 is driven by the Intel 8085A while the TA 1630 is built around the Texas Instruments TMS 9900 16-bit chip.

The Pertec product line in the US now embraces peripherals, small systems, data entry systems acquired with CMC's US operations such as the 2000, and the more recently developed XL series, plus Triumph-Adler products, the first being new printers introduced at NCC.

The deepening recession cast its shadow over many of the talks at NCC, and Poppa added evidence that it is beginning to bite.

"We are seeing long-term customers seeking delivery of 30 tape drives in December when we would have expected them to take 100, while delivery times for 16K RAMs have fallen from 3 weeks, to eight to 12," he said.

"We are taking action to cope with the problem, improving our inventory management and slowing down our marketing effort, and we hope to get through by attrition—people leaving without being replaced—and avoid having to make any lay-offs."

"It is always a traumatic experience for a chief executive officer to have his company acquired from under him, but I am very pleased with the sale to Triumph-Adler. And I'm learning German!"

Dial-up newspapers in Columbus, Ohio

AN online newspaper in the home is being made available to any member of the public in Columbus, Ohio, who has a terminal or home computer with communications facilities.

The local evening paper, the Columbus Dispatch, has established a link with a bureau by which news stories are automatically fed from the newspaper's typesetting computer to the bureau's dial-up machine.

The bureau, Compuserve, has a personal computing network aimed at hobbyists as well as a more conventional dial-up service, and any member of the public will be able to interrogate the newspaper files at a connect-time rate of about eight cents a minute. Three levels of indexing are provided: a general area such as

"sport" or "politics," a more specific area such as "local," "foreign" and then the headlines of the individual stories will be displayed for the reader to choose the one he wants.

Only one day's stories will be held online at a time, on the basis of PDP-11s run by Compuserve. For the time being there will be no attempt to develop an historical service.

The Dispatch has little idea now who the potential customers for this service are and what they want, and the aim is to get a feel for this. Advertising is expected to be added to the service eventually, with the Sunday Dispatch. Home computer users would be able to store news items for future reference on their own machines.

Online 'mug shots' help cops catch robbers

ALTHOUGH many of the New York City police department's computers are used for such routine tasks as arranging personal files and keeping track of parking violations, one system is used to aid police in rounding up sex offenders and hunting down robbers. This is the Computer Assisted Terminal Criminal Hunt system—CATCH.

Catch is an electronic file of arrest photographs; the so-called "mug shots". The likelihood of identifying a criminal from a mug shot is not very good, and police records from the Bronx for 1978 show that witnesses who had "pored over thousands of photos, were able to point to a perpetrator only about 13% of the time.

Although Catch is new, it does show that viewers make identifications about one-third of the time. When police investigate certain types of violent crimes, they try to get as complete a physical

description of the criminal and his modus operandi as the witnesses' muddled memories permit. These descriptions are then keyed into Catch, which goes through its photo files and picks, on average, about 40 mug shots which fit the description. Because witnesses have a relatively small number of pictures to peruse, it is easier for them to spot a criminal.

In order for Catch to be useful, the criminal must have had a previous arrest and thus a mug shot. According to Sgt William Stritzel, Catch's co-ordinator, about 80% of New York City's violent crimes are committed by such "repeaters".

Catch was designed in 1976 by First Deputy Commissioner William Devine when he headed the Police Department's Management Information Systems Division. Captain Raymond Hart and Police Officer Frederick Guerra of the MIS designed the Catch software.

German Prestel available on ICL

THE availability of Prestel-compatible database software on the ICL ME28 replacement for the 2803 should get the new machine off to a flying start in the West German market.

The test trial of Bildschirmtex, the German version of the British Post Office's Prestel viewdata system, is due to begin in Dusseldorf this month, and the Germans plan one

significant difference in the way it operates.

Initially, information providers will store their data on GEC 4000 series computers run by the West German PTT, but any information provider with compatible software on his machine will be allowed to own and operate his own computer attached to the Bildschirmtex network.

DM2 million order for Alphatronic system

A MAJOR success has already been scored by the Triumph-Adler Alphatronic, personal computer, with a DM 2 million German Post Office order for up to 300 units. The machines are to be used as standalone information systems on client telephone orders.

The Alphatronic is built around the same Intel 8085 micro as the company's new US acquisition, Pertec's PCC 2000 personal and small business computer. Designed by SKS of Karlsruhe and now manufactured by Triumph-Adler, the Alphatronic comes in four versions, two for the educational market and two for professionals. Languages supported are Basic and Pascal. It comes with keyboard and display and is offered with several Triumph-Adler printers including a golf-ball and a rotational thermal

printer which prints at 2,000 cps on metallised paper. The PCC 2000 from Pertec features Basic, Cobol and Fortran, and is at the top end of the personal computer market, falling into the \$15,000 to \$20,000 price bracket.

Principal operating system on the PCC 2000 is Pertec's MTX, and the company introduced at NCC in Anaheim a new business package called Magic, Managerial Accounting for Generalised Information Control, which includes eight modules: order processing, invoicing, accounts receivable, sales analysis, inventory management, accounts payable, payroll and general ledger.

The package is written in Basic and designed to be off-licence with an initial licence fee of \$2,000 and \$1,500 per copy thereafter.

IBM problem resolved

IBM has resolved a spot of bother in France over its inability to ship a System 38 on time to kitchenware manufacturer Tefal.

The company took IBM to court complaining that it advertised and took orders for a "non-existent" machine. Tefal cancelled its order when it found IBM could not ship System 38, but the two parties have reached an agreement which IBM France says does not imply "any recognition of liability on either side."

Fujitsu moves into Australia

A BIG share of the Australian market is being won by Fujitsu with its M series of medium to very large mainframes. Up to the end of March, 81 systems had been sold. In addition the company sold three Amdahl 470V series machines.

Fujitsu made a nominal profit in the year of \$Aust 10,000 (about £2,000) on sales of \$Aust 48 million, about £22 million. Australian orders have been won from ICL, Honeywell and DEC customers as well as IBM.

Data encryption committee

THE American National Standards Committee has set up a technical committee on data encryption and asked it to write a draft for a national standard on techniques for incorporating the US standard DEA data encryption algorithm into communications systems.

The new committee is meeting for the first time at the Computer and Business Equipment Manufacturers' Association in Washington DC which is to give it secretarial support.

Low-cost Réalité

A LOW-COST version of its Réalité 2000 mini-based business system has been introduced by Intertechnique in France. Called the IN 200, it is built around a bit-slice emulation of the original Microdata minicomputer Intertechnique first built under licence.

The IN 200 uses the AMD 2903 4-bit micro, which is an enhanced version of the 2901, and is aimed at OEM systems builders. It comes with the Réalité software. Intertechnique sold 789 Réalité 2000s in 1979.

Intertechnique has also launched its first microcomputer. Called the IN 85 and built around twin Zilog Z80 micros, it includes a 1,820-character screen, twin floppy drives with a total of one megabyte and typewriter keyboard in the central unit. Programming is in Basic or macroassembler.

Terrorists strike

ICL's Toulouse office is the latest target to be hit by the Terrorist Committee for the Liberation or Destruction of Computers. The group, which has already attacked CII-HB and Philips offices in the region, set fire to the ICL office and daubed slogans saying "Non à l'Informatique" and "Non à Big Brother". Some ICL 1800s were damaged, but the company reports business as usual in Toulouse, despite the attack.

Logabax seeks twin

A PARTNER, which the French government insists must be a national rather than a foreign company, is being sought for OEM peripherals and small systems manufacturer Logabax, which lost close to £10 million on turnover of about £80 million. Talks have been held with CGE, Thomson and Intertechnique.

AN underground rail network carrying from one from about 50 gravity shafts in the Kilnruvare mine at Kiruna, northern Sweden. It is controlled by a dual DS104 system from ASEA, the Swedish industrial conglomerate. The system controls the flow of ore via the trains, through a crushing plant to the hoists which take it to the surface. Heart of the system is the control room (above) from which all operations are monitored. The railway is part of an integrated production system installed by ASEA.

150 for Nasco Europe

WITH installation of an AS/5000 at VZ Heidelberg, the data centre for the city and local authorities, early in May, National Advanced Systems Corp has achieved its 150th sale in Europe since it started in 1977.

The company says that it has sold more IBM-compatible processors in the past four months than its predecessor Itel achieved in any four-month

period. The Heidelberg machine is installed alongside an IBM 370/148 and runs under VM and DOS/VSE. It was chosen in competition with IBM, against a 4341 which ran well when lightly loaded but ground down under a realistic workload, according to the customer. IBM then bid a 3031 but the Nasco offering proved substantially cheaper.

Yesterday's branch office

And we mean today. The 745 is available immediately from TI Supply. Call us at: 186 High St. Slough, SL1 1JS Tel: Slough 33411. St James House, Wellington Road North, Stockport, SK4 2RT Tel: Manchester 432 0643. 24 Rulland St. Edinburgh, EH1 2AN Tel: Edinburgh 229 4481. Menlow Lane, Bedford, MK41 7PA Tel: Bedford 67466. 25 St. Stephens Green, Dublin. TI Supply, the distribution division of Texas Instruments Limited.

Today's*

Branch office of the future, but available now—that's the Model 745 Portable, from the "Silent 700" series of electronic data terminals. It gives representatives immediate access to computerised data wherever there's a telephone and power point.

Just plug it in, link it to a phone handset and the 745 is ready to send or receive up-to-the-minute data. You can then make instant decisions based on reliable, accurate information.

In your customers' offices, for instance, the 745 can enter sales orders or print out complete reports in seconds on your stock delivery times, prices or detailed quotations.

You can buy the 745 at attractive prices, or use our flexible leasing programme. And you can depend on responsive support from TI's national sales force, with additional back-up from its distributor, TI Supply, to handle small quantity immediate deliveries.

The 745 means change. To greater efficiency and profit. Learn more. Call your nearest TI Supply office for information.

COMMUNICATION NEWS

Americans will have to buy their own phones

THE US Federal Communications Commission, has ruled that by 1982 all subscriber telephone equipment will have to be bought rather than rented, and American Telephone and Telegraph may enter the data processing market. This will end many legal wrangles about whether elec-

tronic mail and packet switching are communications or whether they constitute data processing services which AT&T was forbidden from offering under the 1956 Consent Decree in exchange for the privilege of operating in a regulated market for telecommunications.

Discovering datacomms

FINDING ignorance of basic principles of data communications among would-be technicians led Brian Warrington to prepare a training guide for newcomers.

After becoming managing director of the UK subsidiary of terminal and acoustic modem maker Anderson Jacobson, he looked into the cheapest way of printing about 1,000 copies for in-company use, and his public relations agents suggested publishing it as a book.

The result is Discover Data

Communications, published by Northwood Books in London at £4.50, which after mis-spelling, Anderson Jacobson in the acknowledgments settles down to a simple introduction to some of the equipment and methods commonly used in data communications in an analogue environment.

It includes a glossary of terms and a review of the CCITT V-series recommendations for modem interfaces to terminal equipment and telephone lines.

Enhancements to Tymnet message switch service

A CHOICE of word processing facilities for input terminals, plans for direct communications from Ascl terminals to facsimile terminals, and fax-to-fax message switching by the winter, are enhancements announced by Tymnet for its OnTyme message switching service in the US.

Some of the word processing facilities are now available on the updated service, called OnTyme II, and further commands are to be added in coming months. The message switching services are not available in Europe because the International record carriers — ITT, RCA and WUI — are objecting to the Federal Communications Commission giving its approval. They fear big losses of telex traffic.

The facsimile conversion enhancements will be implemented using the AFT translator device made by Compression Labs of Cupertino, California. They mean that it will be possible to send messages without knowing what kind of facsimile receiver or data terminal the recipient has.

Software for the service is written in Pascal and runs under the ILS operating system in the Tymnet Engine node processors. It supports a wide variety of terminals from Telex to IBM 3270 and devices compatible with them as well as most Ascl terminals.

Facsimile devices supported include CCITT Group 1 and Group 2 types, which receive an A4 page in six and three minutes respectively. Tymnet estimates that 95% of the 200,000 facsimile transceivers in the US will be reachable via its service.

Features of the service include least cost routing, automatic dial-out to an auto-answer terminal, or "mailbox" storage for dial-in collection and multiple delivery to a pre-defined group or a list of recipients.

From September the option of postal delivery called Tymnet-Gram is to be added to the message service, aiming to enable single A4 page messages to be delivered quickly and cheaply to people not accessible directly from Tymnet. Tariffs are planned at one dollar per message sent, reducing to 30 cents each when large numbers of messages are sent in a batch. They are to be distributed from 30 metropolitan post offices and will be expected to reach their destinations the day after sending in 90 per cent of cases.

● Telenet, now a subsidiary of General Telephone and Elec-

tronics, has also announced a message switching service called Telemail to go into service on July 14. It aims to reach a variety of desk top and portable terminals, which it estimates total 1.5 million in use and potentially accessible.

It has asked the Federal Communications Commission to approve tariffs of 22 cents a minute during business hours and five cents a minute outside them, with volume discounts of up to 50%.

Telemail is a subsidiary of the existing distributor there, Gier Electronics, is 100% owned by TRW. So Datapoint may need a completely new West German operation in 1983.

At the same time Gistaro emphasised that a lot of existing distributors in individual countries that dealt with TRW at the moment would be retained by Datapoint after 1983. Notable among these is the UK distributor Ventek, in which TRW owns a 40% share, the majority being held by the Canadian government organisation, Ventektek.

Ventek is far bigger than the Inforex subsidiary in the UK. Inforex was also being acquired for its big customer base of large and prestigious companies. Inforex is best known as a supplier of key-to-disc data entry systems to big mainframe users.

On the question of what Datapoint would do with the Inforex product line, Gistaro said that no decision had been made yet on whether to continue shipping the two most up-to-date Inforex products, the

Speaking fax machine

THE Voice Guide Penfax 7700 facsimile transceiver from Matsushita Graphic Communication Systems uses standard chips to produce synthesised speech messages to guide the user through operation and fault recovery procedures. It is on sale in the US at \$7,200 and operates in all modes including the CCITT Group 2 standard for transmission of an A4 page in three minutes.

Transmission in six minutes gives higher resolution and the fastest speed is 40 seconds in an A4 page.

US firm gets licence

BRITISH Telecom (formerly the Post Office) has sold a licence for its double crucible method of drawing optical fibre for communications cables to Galileo Electro Optics in the US. This company has been involved in optical fibre products since 1959 and claims to be the world's largest producer of optical fibre cables, components and systems.

The licence forms part of a technology exchange agreement between the two organisations. The agreement also covers production of the glass raw materials and well-tested cable construction techniques.

Galileo rates the double crucible process developed by British Telecom the most versatile yet and the only one by which low loss fibres over 10 kilometres long can be produced without splicing.

● British Telecom has run the world's first trial of a submarine optical fibre cable in a nine kilometre loop in Loch Fyne, Argyll. Laying costs can be greatly reduced with such systems because optical fibre cables are much smaller and require spacings average 10 kilometres, against eight in analogue copper cable systems.

Its main publication, the Eurodata 79 Study, has been completed by Logica, the prime contractor, and is due out in a few weeks.

The patent applications relate to the structure of the bus around which systems can be designed and the methods used to allocate tasks and handle high-speed data transfers between processors.

Canadian \$56m project

THE government of the Province of Saskatchewan in Canada has begun a four-year, \$56 million project to use optical fibres to carry integrated voice data and video signals through a 3,200 kilometre broadband network.

Saskatchewan Telecom

communications, the telephone company owned by the Province, has placed the first order worth \$27 million for optical fibre cable and transmission equipment with Northern Telecom, the Canadian telecommunications manufacturing company.

COMPANY NEWS

Datapoint snaps up \$500 million sales by 1983 is aim

THE rapidly expanding manufacturer of distributed processing systems, Datapoint, is acquiring troubled key-to-disc systems supplier Inforex in order to strengthen the field service operations for Datapoint kit in the US and some key areas of Europe.

An agreement in principle between the two firms was reached about two months ago including an option for Datapoint to buy the Inforex subsidiaries in Europe (CW, April 17).

Datapoint executive vice-president of corporate development, Ed Gistaro, told Computer Weekly Datapoint was particularly interested in the Inforex service organisation in Europe because Datapoint's agreement with TRW, under which the huge engineering conglomerate is the master distributor for Datapoint kit outside the US, was due to expire in 1983.

Gistaro said that the large Inforex marketing and service force in West Germany could be particularly valuable because

the existing distributor there, Gier Electronics, is 100% owned by TRW. So Datapoint may need a completely new West German operation in 1983.

At the same time Gistaro emphasised that a lot of existing distributors in individual countries that dealt with TRW at the moment would be retained by Datapoint after 1983. Notable among these is the UK distributor Ventek, in which TRW owns a 40% share, the majority being held by the Canadian government organisation, Ventektek.

Ventek is far bigger than the Inforex subsidiary in the UK. Inforex was also being acquired for its big customer base of large and prestigious companies. Inforex is best known as a supplier of key-to-disc data entry systems to big mainframe users.

On the question of what Datapoint would do with the Inforex product line, Gistaro said that no decision had been made yet on whether to continue shipping the two most up-to-date Inforex products, the

existing distributor there, Gier Electronics, is 100% owned by TRW. So Datapoint may need a completely new West German operation in 1983.

At the same time Gistaro emphasised that a lot of existing distributors in individual countries that dealt with TRW at the moment would be retained by Datapoint after 1983. Notable among these is the UK distributor Ventek, in which TRW owns a 40% share, the majority being held by the Canadian government organisation, Ventektek.

Ventek is far bigger than the Inforex subsidiary in the UK. Inforex was also being acquired for its big customer base of large and prestigious companies. Inforex is best known as a supplier of key-to-disc data entry systems to big mainframe users.

On the question of what Datapoint would do with the Inforex product line, Gistaro said that no decision had been made yet on whether to continue shipping the two most up-to-date Inforex products, the

Pets breed success

NET profits of \$3,000,000 for the second quarter ended December 31, reported by Commodore Business Machines, have more than doubled compared with \$1,340,000 for the same period in the previous year. Turnover of \$31,516,000 was also more than double the \$15,677,000 recorded in the previous year.

These figures are attributed by Jack Tramel, president of CBM, to the performance of the Pet computer systems division. In the UK sales of the Pet have exceeded 18,000, and CBM claims to have 50% of the UK market for microcomputer systems (CW, January 3).

Profits up 52%

NET profits for the past financial year are reported by General Instrument to have increased 52.4% from \$32,524,748 the year before to \$50,560,532. Turnover for the same period increased 30.4% from \$550,648,002 to \$718,103,819.

ADVANCED FILE DESIGN—Part 10

File structures for database systems

AS we have seen in earlier works, indexed sequential files provide a compromise between sequential files with their capability for efficient batch processing and direct files and their more immediate response.

The fact that standard software is available means that there is less design effort required by the user than for a direct file where the user has to choose an algorithm, loading method, overflow handling routine etc. It is no surprise therefore that indexed sequential files are widely available on all types of machine from the microcomputer to the large mainframe.

Since indexed sequential files were first introduced the DP environment has changed quite considerably. Perhaps the two most significant changes that affect file organisation have been the move towards online systems and the database approach.

Online systems have produced a need for quick response to queries and a high measure of security and integrity, whereas the database approach has produced a requirement for the

facility to access data records in many different ways depending on the application. It is worth noting that these two developments do not necessarily go hand in hand and that it is possible to have a database system that isn't online or vice versa.

In Part 10 we shall examine some of the concepts of database systems as they affect the file designer and in Part 11 some specific database management systems will be studied.

The database approach

With the types of file organisation discussed so far we have seen how the design of a file or set of files can be optimised to suit the application. With the database approach, however, files can be accessed by several different applications—in fact the individual applications can be viewed as data channels through which data is added to or retrieved from the database.

The database itself may be a single file or a set of files, the important fact being that the database can be accessed by different programs in different ways. For example a personnel file normally accessed via a record key of payroll number for

the production of pay slips and similar documents, may need to be accessed via employee skill codes for production planning purposes.

The programs accessing the database may be regular production programs such as payroll management statistics, or may be of an ad hoc nature and run only once, especially if high level query facilities are provided. It is thus not relevant to optimise the database for any specific single application.

Logical and physical database

The logical and physical concepts were first introduced to cover the case of record blocking where the words are used to represent application program-oriented and device-oriented records respectively.

The logical concept has been extended further in database to cover the relationships between data fields or elements as well as records. Once the data fields of a database have been determined a logical data model of the database can be constructed representing the application-oriented view of the database.

The physical database is concerned with the actual storage of data on the available peripheral devices. The mapping of the logical database on to the physical database is normally accomplished by a set of routines known as the database management system (DBMS). Application programs are completely removed from the physical data

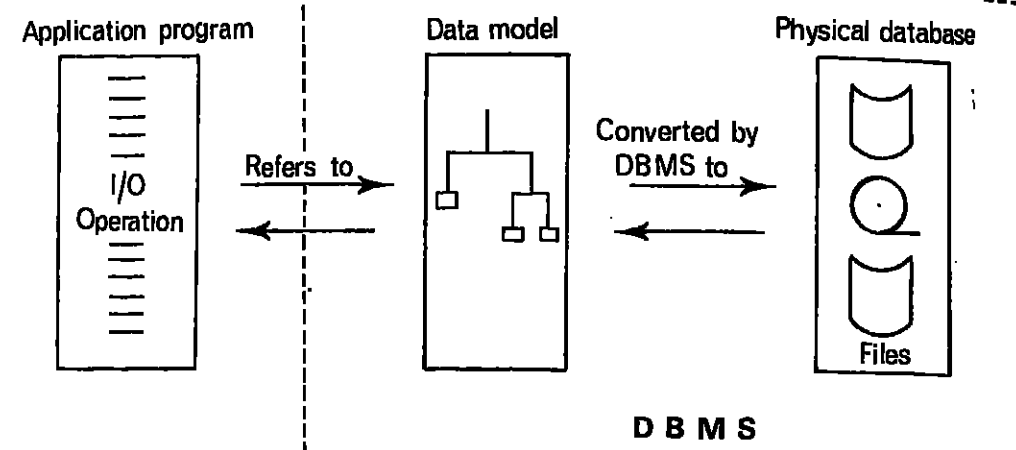

Diagram 1: The database environment.

base and can only gain access to it via the logical database.

The I/O operations in application programs which access the database files are special database I/O instructions which operate on a logical database; the DBMS then translates these into physical I/O operations, (see Diagram 1).

The objective of this approach is to keep applications independent of physical data storage so that either can be changed with minimal disturbance to the other, at least in theory. This concept is sometimes referred to as logical data independence.

At present there are three generally recognised data models, namely the hierarchical, network and relational. In the hierarchical model (Diagram 2) data fields and records are related by a parent-child relationship (as illustrated in the diagram by cars and their engines). It is worth noting that the hierarchy can be deeper than the simple two level one in this illustration.

The network model permits a record to belong to a number of parents thus permitting a more economic logical structure. Diagram 3 illustrates this for the same data used in the previous example.

In the Codasyl database model this structure is built using the set concept where a data field may be the owner of a set comprising data fields which are members of that set, though certain restrictions on set membership and ownership further limit the structures that can be built.

The relational data model employs tables of data elements known as relations stored in third or fourth normal form.²

DBMS selection

As far as the DBMS is con-

cerned therefore, we have the situation that there are a variety of data models which have to be mapped on to available file storage peripherals and file organisation techniques, preserving as far as possible the ideal of logical data independence.

Once a data model has been selected, then a choice of the DBMSs supporting that model can be made in such a way as to optimise the performance of the physical database for a given environment.

It is here that there is the first opportunity for optimisation, since the database can only be constructed using the physical file organisations supported by DBMSs.

For example if an organisation has large volumes of sequential batch processing and relatively few query-type applications, then choice of a DBMS based on inverted random files with multiple indices is unlikely ever to achieve the same performance as a DBMS using indexed sequential files, however well the former was optimised.

Once all functional requirements have been met therefore, a DBMS should be chosen which is most suited to its operational environment. The larger DBMSs normally offer scope for matching the database to any particular environment by giving a choice of physical file organisations covering the whole spectrum from pure query to large batch-type applications. Smaller systems such as those for mini- and microcomputers do not generally offer such a choice.

When a database has been set up, the individual files may be optimised by the techniques described in earlier parts that are appropriate to those file organisations.

It is unlikely that the overall

hardware performance in a database environment would equal the performance of having separate applications each carefully optimised (as early DBMS users found to their cost!) because of the overheads needed to provide the flexibility of data access. Indeed, hardware performance is seldom given as a reason for the adoption of a database approach.

A difficulty in optimising the performance of a database system lies in knowing precisely what is happening to the database at any one time, especially in an online environment.

If a log of transactions is kept, an analysis of the transactions may help to optimise the database files by identification of bottlenecks or other snags.

This approach would be effective in situations where routine applications predominate rather than those when query-type applications form a significant part of the workload, since this method relies on historic data.

It is also possible to use hardware and software probes for this same purpose. Also, most DBMSs provide statistics or reorganisation which may be used in a similar way. A database system should ideally be self-optimising, and possibly a new generation of DBMSs using advanced storage technology will achieve this in a way that is completely transparent and automatic.

In Part 11 we shall examine further the physical file organisations for database systems and consider some specific DBMSs.

More Billion \$ Brains . . . for Sales Support

Consultants

Analysts and Consultant Analysts

£12-£15,000 + Car

£10-£12,000 + Car

Why do we need more "Billion \$ Brains"? To help our client maintain the phenomenal and profitable growth pattern of the last five years. Next year the company is looking for its first \$1 billion turnover from the sale of the word processing and data processing systems. The growth is consistent and controlled, the potential enormous. Tremendous opportunities are available to everybody within the company, not only for exceptional earnings but also for complete job satisfaction.

Consultants

£12,000 - £15,000 + Car

Analysts and Consultant Analysts

£10,000 - £12,000 + Car

We expect Consultants to have experience working with IBM hardware and to have had some exposure to the special environment of large, national or multi-national organisations. We expect excellent personal skills - people who are presentable, competent, self-motivating, responsible and capable of making presentations to all sorts of audiences.

Further, we expect proven technical skills in systems analysis, design and programming, preferably with virtual machines.

We need people with a good technical background, preferably with IBM equipment. These roles are primarily in pre-sales situations and therefore applicants must be presentable and personable. Technical experience will include systems analysis and design and preferably programming in COBOL, RPGII or BASIC. The product range uses Virtual Operating System techniques and experience of such systems would be an added advantage.

Please telephone (24 hour answer service) or write to apply. Quote Ref. CW 136-1

SYSTEMS IMPLEMENTER

**ANALYST/PROGRAMMER
RPG II**

**SENIOR PROGRAMMER
RPG II**

Three computer professionals, with at least two years' relevant experience, are required for the development and implementation of a variety of challenging applications using a network of IBM 5280s and/or System 34s which will communicate with the Head Office 4300.

Experience using IBM minis will be a significant advantage and the successful applicants can look forward to different levels of overseas travel.

Each position requires a mix of skills including technical, project control, implementation and support. Training will be given where necessary.

Our client plays a major role in oil exploration throughout the world, and, in maintaining its leading position, uses the latest decentralised computer technology to support its management and administrative functions. As the Company continues to expand, the persons appointed can anticipate exceptional career opportunities coupled with equal financial rewards.

The offices in Central London are within one mile of four British Rail main-line stations. Season-ticket loans are provided and additional benefits include a FREE PENSION SCHEME, FREE LIFE ASSURANCE, FLEXTIME and LVs.

SYSTEMS CONSULTANTS HARDWARE AND SOFTWARE

BERKSHIRE

A number of outstanding opportunities have arisen for both SOFTWARE and HARDWARE consultants as a result of the increasing demands being placed upon our client's System Reliability and Usability departments.

Our client can offer you the opportunity to direct the development of future Hardware and Software in the key fields of:

- ★ USABILITY ENGINEERING
- ★ USER/MACHINE INTERFACING

With Key responsibility for:

- ★ DEFINING DEVELOPMENT OBJECTIVES
- ★ COMPETITIVE EVALUATION
- ★ OPERATIONAL ANALYSIS

To meet the challenge that these positions offer, applicants must have a successful record, and substantial experience matching one of the following profiles.

SOFTWARE

- ★ SYSTEMS SOFTWARE DESIGN
- ★ OPERATING SYSTEMS
- ★ SYSTEM MODELLING

HARDWARE

- ★ MAINFRAME DESIGN ENGINEERING
- ★ LOGIC DESIGN
- ★ SYSTEMS ORIENTATION

Conditions of employment are excellent and good commanding salaries are enhanced by first-class career prospects and fringe benefits. A generous relocation package is available where appropriate.

WORCESTER CONTROLS (UK) LIMITED

Burrell Road, Haywards Heath, Sussex

require a

SYSTEMS PROGRAMMER

Applicants must have had a minimum of one year's systems programming experience in a DOS/VS, CICS/VS environment.

We have recently installed an IBM 370/138 and will shortly start a number of new projects that will require the assistance of an expert Systems Programmer. New projects over the next two years will include an extension to our TP system, conversion to DOS/VS, installation of POWER/VS, implementation of an on-line programming aid, examination of data-base Management Systems and a possible switch to COBOL applications programming.

Negotiable salary, 5 weeks annual holiday, pension and life insurance scheme, subsidised canteen.

If you feel you can handle the above workload as part of a small dynamic team then apply in the first instance to:

Margaret Jury,
Personnel Administrator,
Tel: Haywards Heath 51551

SYSTEMS PROGRAMMERS

Daresbury Laboratory is developing major national facilities for use by university groups carrying out research in atomic, molecular and biological sciences, nuclear physics and computational science. The Laboratory operates an extensive network of computers centred on a large IBM 370/165 with applications ranging from accelerator control and data acquisition to very large simulations on a CRAY-1 as well as providing for the general computing needs of scientists using the research facilities of the Laboratory.

The CRAY-1 was installed in 1979 and two new accelerators will start work in 1980 and 1981. To cope with the increasing work the Laboratory seeks SYSTEMS PROGRAMMERS

to work on data acquisition and interactive analysis on GEC 4000-series computers. Although successful applicants will initially concentrate on this area of work they will have ample opportunity to gain experience in many other aspects of computing, and staff are also encouraged to maintain an interest in the scientific work of the Laboratory.

Successful men or women will possess a good honours degree in a scientific discipline, a sound knowledge of computing concepts, and a firm ambition to build a career in scientific computing.

Appointments will be made in the Scientific Officer grade in the salary range £5691 per annum to £5488 per annum according to qualifications and experience. Salaries are under review.

There is a non-contributory superannuation scheme a generous leave allowance and a flexible working hours scheme.

CLOSING DATE 28th JULY 1980

Please write or telephone, Warrington 65000 Ext. 467, for an application form quoting reference number DL/743 CW10.

The Personnel Officer,
DARESBURY LABORATORY
Science Research Council,
Daresbury, Warrington, WA4 4AD.

Software systems engineer for petrochemical research.

Due to the increasing number and complexity of projects both in hand and imminent, our research centre at Abingdon - which specialises in fuels, lubricants and additives - needs a technically minded and creative man or woman to join a small team providing an efficient and flexible computing service for our scientists and technicians.

With a degree in Maths, Statistics, Chemistry, Electronics, Chemical or Mechanical Engineering or an associated discipline, you must be able to appreciate the scientific and technical problems encountered in our research - logically thinking them through to provide cost-effective computer solutions.

While at least two years practical experience of mini-computer systems and software is essential, some real time or process control experience is advantageous.

A special task for the next two years is the implementation and development of a real time project oil motor lubricants and fuels. This will involve an initial training period of several months in the USA with the supplier of the computer system before becoming involved in the implementation, start-up and enhancement phases of the project.

A competitive salary will be supplemented by a full range of benefits, and generous relocation assistance to this attractive rural area just on an hour away from London and only 20 minutes from Oxford will be provided where appropriate.

Please write with full details to: Denise Pearce, Employee Relations Service, Esso Research Centre, Abingdon, Oxon OX13 6AE. Or phone her on 0235 45571.

JBA

Sales Executive

London

c.£16,000

A well known computer manufacturer wishes to appoint an Account Manager to take responsibility for a prestigious client in Central London. The customer already uses their hardware and is planning to increase the power of the installation, which indicates the sales potential - and also the competition. Applicants must have a sound d.p. background together with several years of successful sales within the computer industry. Ability to negotiate and close sales at top level is essential. The package carries a £13,000 guaranteed income with £16,000 as the nominal but it is expected the right person could earn c. £20,000.

Contact: Jim Baker

Software Consultants

Central London

£8,000 - £10,000 + equity.

A new, recently formed software consultancy has opportunities for two d.p. professionals to join a design team which is currently carrying out design studies for a major mini computer manufacturer.

The areas in which expertise is required are:

Database Software - Ideally, candidates should have experience of working with the internals of one of the major CODASYL dbms's. However, a System Programmer who has a clear idea of database concepts and who is easily adaptable may well be acceptable.

Data Communication - proven experience of having worked with one of the major Networks - e.g. SNA, DSA and DECNET, would be highly desirable. Again, however, experience gained in associated areas which has given individuals a clear idea of network architectures, protocols etc. may be acceptable. These are "ground-floor" opportunities in the truest sense of the phrase. Phone now for more details.

Contact: Andy Wright

Real Time Programmers/ Designers

S.W. England

neg. to \$9,000

Our client is one of the leading European systems houses with a history of consistent successful growth. Projects are developed in-house and on site on a variety of minis including DEC, DG, Ferranti, GEC and Burroughs systems. The sophistication of the type of real-time work carried out often involves the design of specialised operating software, multi-processor networks and communications systems. Candidates should preferably be graduates and have had at least two years experience of two or more of the following: CORAL PTW/2, COBOL, BASIC or ASSEMBLER. Ideal opportunity to contribute to major developments in the real-time systems world.

Contact: Margaret Stevens

Analyst/Programmer

Surrey/Sussex Border

c.£8,000

A small, successful consultancy situated in very attractive surroundings are looking to recruit experienced people, to join a highly professional team developing commercial and scientific systems.

A minimum of 2 years programming and 1 year's analysis experience, from either environment would be considered. Good communicative skills are essential, and the ability to control staff would be an advantage. Career prospects are excellent, progression to a Project Leader role would be offered to the successful candidate in the immediate future.

Contact: Janet Chilvers

COBOL Programmers and Senior Programmers

Glouce.

£8,000 - £9,000

A number of positions are available for programmers with from 1 to 4 years COBOL experience to join our client's new team, developing and redesigning their manufacturing and reporting systems on a new HP3000. Applicants for senior positions, i.e. 3 years +, are expected to possess on-line systems experience and be fluent and effective in spec. writing. A knowledge of structured programming would be a marked advantage and candidates should have good management potential.

A relocation package is available for those wishing to move to this beautiful part of the country, plus all the normal large company benefits.

Contact: Brian Postles

Programmers

Berkshire

up to £7,500

A small, but rapidly expanding, systems house who specialise in real-time projects would like to recruit several programmers to work on the development of new systems. Candidates should have a nominal three years experience in real-time mini or microcomputer development using languages such as FORTRAN, BCPL, etc. A knowledge of small system software (device drivers, operating systems, etc.) would be an advantage. Since there are several opportunities, staff with more than three years experience would be considered as would a junior.

(1872)

TECHNICAL SUPPORT

Our countrywide client, an international Computer Bureau, needs Technical Support Specialists for their sales teams. Hands-on experience of DEC System 10 in a financial environment would be a distinct advantage for energetic graduates with 2-3 years' appropriate experience.

c£7.5K + car

COBOL

Challenging positions (UK with overseas opportunities) for COBOL programmers offered by leading International Group specialising in software development and high-level systems. 2+ years on a major mainframe in a commercial on-line or batch environment is essential.

£7-10K

BASIC + BEDS/SURREY

Analyst/Programmers with 18+ months' Basic + on PDP 11's (preferably under R515) or on DGs required by two divisions of this Systems House, a subsidiary of a major International Corporation. Applications are financial and technical.

c£8.5K

SALES SUPPORT

Systems Engineers with strong mini/micro backgrounds wishing to move into sales support in the automation systems field are encouraged to apply for these Manchester and Hereford-based positions. Working as part of a sales team your responsibilities will include tendering, writing proposals, and providing technical expertise.

c£8.5k

CROYDON - IBM

Programmers and Analysts/Programmers with 18+ months' COBOL or RAL for Commercial Applications Division of Multinational Consumer Electrical Manufacturer. IBM/DC experience a considerable asset. The division provides computer services to companies involved in marketing their Client's products. Usual large company benefits apply. Good career prospects.

to £8.5k

IBM-Europe + UK

Systems Design, Support & Consultancy

The client is the world's largest independent systems-software company - their major specialisation is in the installation of medium-size IBM machinery and pre/post installation consultancy. Continued expansion in Northern Europe has given rise to several vacancies in the area.

Technical Support Specialists and Systems Designers are their current requirement, but their German and Swiss branches will also need Senior Consultants in the very near future.

You will have had solid IBM experience in some, or all, of the following: DOS, DOS/VS, OS/VS (especially if gained in a manufacturing or software house environment) will be of special interest. Also TP experience - CICS, IMS, Total or Adabas advantageous and you should be conversant with at least one European language.

Salaries in the range £13-20K

MIDDLE EAST

IMS DB/DC professionals required by West London-based Software House with both new and established projects operating in the Middle East. Usual excellent overseas benefits, and opportunities for future work in the EEC if desired.

c£16k

FINANCIAL SYSTEMS

Consultants and Business Analysts with solid programming backgrounds, preferably experience gained in financial fields as banking and insurance, required by City Office of leading Consultancy. Project leadership experience is also required.

£11-16k

PROCESS CONTROL

Real-time mini (pref. PDP11) or micro experience for advanced design and development work in Process Control applications, required by leading instrumentation and Control Group based in Hertfordshire. Ideally 2-4 years' Assembly or CORAL should be offered. Project leaders also required.

£6.5-11k

SURREY-MILITARY

Programmers and Systems Analysts required by Defence-oriented Systems House based in West Surrey. Your experience should be in real-time applications such as radar, image processing, weapons systems, etc., and your languages will probably include Assembly and CORAL. Some positions based at the Company's offices in Southern Germany.

to £10k

MESSAGE SWITCHING

Systems Software Programmers with 2 or more years' experience in the message switching field, required for an advanced telecommunication system currently being developed in London, in parallel with a U.S. project. You will be involved in initial development work, and liaison with the U.S. followed by worldwide implementation of the system.

MIDLANDS APPOINTMENTS

A wide range of jobs and good financial rewards

THE Midlands must rate as one of the most important DP centres in the UK. Although not as intensive as London, in terms of the number of installations, it should not be regarded as a technological "back water."

The range and types of installations in the Midlands are just as wide as the products produced. Birmingham itself has often been referred to as the "city with a 1,000 trades" ranging from cars to jewellery.

Perhaps one of the most interesting features of the Midlands is the wide range of sizes and types of companies operating in the region, offering DP professionals the opportunity of involvement in a wide spectrum of applications ranging from commercial, through manufacturing and distribution, to the scientific and financial modelling areas.

In addition to the wide range of firms and applications, most computer manufacturers are represented in the Midlands, ranging from large number crunchers with mass storage devices through a comprehensive selection of minis, and micros.

A number of firms have head offices based in the Midlands and make extensive use of communications equipment and distributed processing, thereby offering tremendous scope for the DP professional.

It is worthy of note that an increasing number of London-based organisations are in the process of or are actively considering moving head office operations to the Midlands to take advantage of the more reasonably priced business premises and better living conditions for their employees.

In addition to user installations, most mainframe and minicomputer manufacturers have sales and support operations located in the Midlands and two large mainframe manufacturers have recently moved their UK training centres to Birmingham.

The area also has a number of successful software houses and bureaux, once again giving added scope to the data processing professionals wishing to broaden their experience.

The Press seems particularly gloomy these days, announcing redundancies

in the majority of manufacturing areas, and while the Midlands is first and foremost a manufacturing centre, the commitment to data processing by Midlands based organisations is still a major one.

This is reflected in the numerous upgrades to equipment, new orders placed and systems development plans users are embarking on.

This has made the Midlands a thriving DP community, where most users have already established themselves in the standard range of applications and are now moving into more advanced areas of the business, where major benefits can be made.

In these areas extensive use is being made of all of the latest software available obviously including online, databases and distributed processing.

So from a career point of view, the Midlands has a lot to offer data processing professionals, but what about the environment — is it all foundries and canals?

Not any more. The Midlands breaks down into the East and West and, without wishing to start a civil war, the West

Midlands is the larger centre in terms of computer installations with major concentrations in Birmingham, Coventry, Wolverhampton and the highly industrialised Black Country.

However, even in the West Midlands you can live in a small rural town or village and still commute to the major centres within 30 minutes. A number of large sophisticated computer centres are located in rural areas including Worcester, Burton-on-Trent, and Stafford.

The East Midlands offers two main locations, Leicester and Nottingham, both cities enjoying excellent facilities and are renowned for offering inexpensive quality housing.

It is still possible to buy a modern centrally heated semi-detached house within daily commuting distance of Birmingham for about £18,000.

If you are feeling more ambitious, the Midlands can also accommodate you, but once again the accent will be on value for money.

In addition to being a reasonably priced housing area, there is a wide range of leisure activities, particu-

larly well serviced by sports centres, numerous football and rugby clubs run both by employers and privately.

The National Parks in the Peak District and Wales are close at hand offering a wide range of facilities. The region is well equipped with first division football clubs as well as first class rugby and cricket.

The third most important point to any data processing professional must obviously be salary, having already discussed the installations and environment.

In the Midlands, salaries over the last few years have steadily increased to the point now that most large employers pay experienced data processing professionals well.

In fact, it would appear that salaries on offer in the West Midlands area in particular, do not seem to fall that far short of salaries offered in the Greater London area.

With so many benefits to offer, does the area actually have vacancies? The simple answer is yes. In the Midlands vacancies currently exist at all levels, where the minimum requirements is usually 18 months experience

The Midlands is second only to London for the number of installations and people employed in DP in Britain.

In this feature DAVID WADE, a director of the Birmingham based firm Specialist Computer Recruitment, gives his reasons why the Midlands is worth more than a cursory glance when considering changing job.

ranging up to the most senior levels.

Companies in the area will pay realistic salaries, but do look for a good educational background, sound practical experience, proven career progression, combined with career stability. Companies generally look for applicants who can communicate fluently and are enthusiastic about their career and the DP industry in general. Inability or lack of desire to communicate on career achievement to a prospective employer is considered a big turn-off. At the more junior levels, especially programming, applicants should be prepared to put their knowledge on trial with an aptitude test or a technical interview.

On the subject of interviews, these two tips probably apply nationally as well as in the Midlands. If you are interested in a particular job, then be sure to let the employer know of your interest.

I am confident that many applicants have not been offered positions, because they fail to communicate their basic interest in a particular post.

Secondly, if an employer and you have either changed your mind about the interview or cannot make the appointment, then telephone and let them know.

To quote a Southerner who has lived in the West Midlands for ten years, "Civilisation does not cease north of Watford!" The people are generally a little less hostile, particularly in the rural areas. The quality of life is good and employees generally provide quite generous relocation packages to encourage good technicians to join them.

In summarising, I hope I have given an insight to the Midlands where the hard working, enthusiastic computer professional can gain good financial rewards, improved job satisfaction and provide himself and his family with a better standard of living.

In this age of pollution and high living costs, it makes sense to explore the Midlands. You do not know until you have looked, so why not check it out? You will find a great number of people living here who would not consider living anywhere else.

EAST MIDLANDS PROGRAMMERS ANALYSTS PROJECT LEADERS

Minimum 18 months Salaries to £8,000 p.a. and INDEX LINKED

Our clients are a well established and highly professional computer services organisation. Operating both at home and abroad, they provide consultancy, support services, software products and bureau facilities to external organisations.

Major expansion in the East Midlands has created a number of posts which offer very real career development.

You will have the opportunity to develop your skills at all levels in:
REAL-TIME MINICOMPUTER WORK
A WIDE RANGE OF FINANCIAL AND COMMERCIAL APPLICATIONS
SYSTEMS FROM FEASIBILITY TO IMPLEMENTATION
RPG II, COBOL AND ASSEMBLER

Current projects involve ICL, IBM, Small Business Systems and Philips hardware as well as Microcomputers.

You should offer at least eighteen months' commercial experience. The particular hardware, language or systems are of minor importance.

Salary levels are excellent and INCREASE automatically with inflation. This area offers LOW-COST HOUSING and where appropriate, assistance with relocation will be considered.

Males or female candidates should contact Patrick Convey quoting reference number CVV 278

COMPUTER PERSONNEL CONSULTANTS
4th Floor, The Rotunda
Birmingham B2 4PA
021-632 6648

CPC

NORTH BIRMINGHAM

Our Client, the Computer Services Division of a large Manufacturing Group, is recruiting additional staff to cope with an increasing demand for its services. Group policy is one of developing DISTRIBUTED PROCESSING techniques with terminals allied to the central mainframe. Manufacturers packages are used where possible to handle the wide range of financial and manufacturing systems required. The salaries for these posts will be enhanced by the Annual Review which takes place in November and which should reflect the current rise in the cost of living.

SYSTEMS CONSULTANT £8,500 + NOV. REVIEW

To investigate and postulate solutions to a wide range of business systems problems. Broadly based experience of Manufacturing and Commercial systems is required together with the ability to deal with the clients at all levels.

SYSTEMS PROJECT LEADER £7,500 + NOV. REVIEW

A broad knowledge of Financial systems is required. Some programming and mini computer experience would be useful but is not essential.

To learn more about these excellent opportunities contact Peter Bowen quoting Ref. C1029. Phone Codecall (090 74) 4896 evenings and weekends.

PROGRAMMER TOWARDS £6,000 BROADWAY WORCESTERSHIRE

Our Client, Group 4 Total Security, requires an experienced programmer preferably with RPG II in a commercial environment. However, applications are invited from programmers with any Mainframe language as full training on RPG II will be provided.

Currently using a Univac 90/30 256K, with both Batch and On Line Systems, there are plans for major enhancements on Hardware, Systems and Programming Techniques.

Group 4, with an enviable growth record, is part of the largest security company in Europe. Career Prospects and Fringe Benefits (including Relocation Expenses, a Private Family Medical Scheme and Free Lunches) will be those expected from a major employer.

NATURAL SELECTION

TEAM LEADERS · NOTTINGHAM – TO £7.5K

Applicants will ideally have several years programming experience in one or more of FORTRAN, COBOL AND IBM ASSEMBLER, together with the abilities to design systems and lead a small team of analysts and programmers for one of the top UK companies.
Contact Reg Heath, quoting ref. RH/J294.

ANALYST/PROGRAMMERS · BIRMINGHAM – TO £8K

Ideally you will have real-time systems experience using minis in a commercial or manufacturing environment. You should have good COBOL experience and a knowledge of FORTRAN or ASSEMBLER would give an advantage. These are very good career opportunities.
Contact Digby A. Dyke, quoting ref. DD/J232.

SYSTEMS ANALYST · WEST MIDLANDS – c£9K

Division of major manufacturing group requires Analyst to join small team developing on-line systems on expanding terminal network, utilising latest generation ICL mainframe. Applicants should have some programming experience. Car mileage allowance is paid for local business travel.

Contact Mark Ogden, quoting ref. MO/228.

MICRO PROGRAMMERS · RURAL WARWICKSHIRE c£9K

Our client needs Programmers experienced in the specification/design and writing of Micro Computer systems for Automation Systems in all Process Industry areas. The position contains elements of development of NEW standards, including total Customer Contact and Sales Support.

Experience in a real-time operating system and CORAL 66 (or equivalent) is desirable.
Contact Reg Heath, quoting ref. RH/J298.

COBOL PROGRAMMERS · NORTHAMPTON/EUROPE

18 months programming experience, including COBOL skills, could qualify you for this exceptional opportunity with an internationally known and respected company. You are likely to be in your early 20's, ideally have some ASSEMBLER knowledge, and will welcome occasional travel to Europe.

Contact Mark Ogden, quoting ref. MO/228.

SALES – £16K+ ON TARGET · BIRMINGHAM AND MIDLANDS

The leading British supplier of distributed data processing equipment seeks sales person to help pioneer Future Office Systems, utilising real-time hand print terminals and interactive colour televisions. Package includes 1.6L Cortina, expenses and high basic salary.
Contact Mark Ogden, quoting ref. MO/J245.

SYSTEMS ANALYSTS · WORCS. – c£9K

A real opportunity to become involved in the DEVELOPMENT of sophisticated REAL-TIME commercial systems on 4th generation ICL 2900 series hardware. Real career prospects in a superb working environment.

Contact Reg Heath, quoting ref. RH/J233.

Computer People Midlands

Recruiting for clients

VLGROUP

COBOL/CICS/DLI PROGRAMMERS BIRMINGHAM – c£8K

We invite applications from individuals with 'meaningful' experience of COBOL programming in a Database/Teleprocessing environment. Utilising the latest IBM 4th generation hardware, our client is a profitable Major Group of Companies with a total commitment to DEVELOP NEW sophisticated Systems offering long term career prospects in an enlightened working environment.
Contact Reg Heath, quoting ref. RH/J230.

SYSTEMS ANALYSTS · WEDNESBURY – TO £8K

People with 2+ years experience in general commercial systems ideally including order processing, sales ledger or credit control are required urgently. You would be involved with the development of real-time systems on ICL mainframe with 100+ terminals throughout the UK.
Contact Digby A. Dyke, quoting ref. DD/J297.

IBM COBOL PROGRAMMERS · NOTTINGHAM – TO £7.5K

Our client has vacancies at many levels for experienced programmers. Training and career prospects are first class. Many major projects are now being developed using minicomputers, databases and real-time techniques.
Contact Reg Heath, quoting ref. RH/J296.

SENIOR ANALYST PROGRAMMERS · WALSALL TO £7.5K+ BONUS

Your 2½ years experience should include IBM OS and PL1 commercial programming. You will be involved at all stages of systems development and design, program specification writing, supervision of programmers, systems implementation and user-training.
Contact Digby A. Dyke, quoting ref. DD/J292.

SUPPORT ANALYST/PROGRAMMER · WEST MIDLANDS – c£6K

Microcomputer systems and marketing organisation with backing from major international group seeks support person with at least one year's experience in systems programming, or a longer involvement in applications programming. Any previous microcomputer experience or ASSEMBLER level programming knowledge will be advantageous.
Contact Mark Ogden, quoting ref. MO/271.

COMPUTER AUDITOR · NOTTINGHAM – TO £6.5K

If you have a minimum of 1 year commercial IBM COBOL programming experience and a desire to work with micros, minis and mainframe, this interesting and challenging position should appeal. Career prospects to analysis are good.
Contact Reg Heath, quoting ref. RH/J295.

APPLICATIONS PROGRAMMERS · BIRMINGHAM – TO £6.5K

People with 12 months+ experience of COBOL (any hardware) or with PL1 ASSEMBLER experience to be trained in COBOL are required by a large multi-national company. Career progression provided for advancement to Team Leader jobs or move into Systems Analysis work.

Contact Digby A. Dyke, quoting ref. DD/J231.

COBOL PROGRAMMERS RURAL WARWICKSHIRE c£7.5K

A rare opportunity to DEVELOP NEW IMS DATABASE Systems in the MATERIAL CONTROL/ENGINEERING/PROCESS CONTROL and ACCOUNTING areas on sophisticated IBM 3033 hardware utilising the latest DATABASE software. 2/4 years COBOL experience and a desire for analysis involvement is essential.
Contact Reg Heath, quoting ref. RH/J299.

CICS PROGRAMMER WEST MIDLANDS – UP TO £7K

Experienced IBM CICS programmer seeking involvement with design work will be attracted to this post. International company with modern premises offers on-line mainframe installation. COBOL experience is desirable, and knowledge of DLI will be advantageous. Candidates will preferably have worked in a DOS/VS environment.
Contact Mark Ogden, quoting ref. MO/S1.

Response Procedure: To obtain more details, telephone for a confidential application form or send the coupon (no stamp required) to: FREEPOST, Computer People Midlands, Alpha Tower, Birmingham, B1 1BR.

Computer Operations Professionals

What goes up must come down, right? Wrong.

And just who do we think we are, defying the laws of gravity? Well, we're BL Systems Limited, and the reason we're so sure that Sir Isaac Newton was misinformed is quite simple—all these positions have been created as a direct result of internal promotions and expansion. When men and women start going up in our company, they keep right on going, thanks to our programme of continual training and personal development. All the positions are based at our large ICL-based Data Centre in Cowley, Oxford—except for some IBM Operating posts located at the Cowley Service Data Centre, linked to our CDC at Redditch. It's a case of pleasing all of the people all of the time...

Operators £5,500-£7,000

For the ICL operating jobs, you'll need experience of running under G3, DME or VME/B to join our highly professional team.

IBM Operators need knowledge of MVS/JES, and will operate remote job entry terminals, submitting input, controlling workflow and completing work schedules to agreed deadlines.

In all cases, we work a 3 shift, 24 hour/5 day system, and voluntary overtime is available.

Network Controller c. £6,000

Here, you'll join a compact team supporting RJE, TP and MOP users and be responsible for hardware and software support—e.g. FEP modems, DCP's, TCP's and TE's. ICL 1900/2100 series and VME/B experience would be an advantage.

Operations Support Analyst c. £6,000

Working with a team providing a link between development, operations and users, your experience must include JCL, ICL G3 and/or VME/B operating systems. A flair for problem solving would be beneficial.

IBM people can skip this paragraph. The Data Centre operates a 2960/DME + 1904S running under G3 Shared Filestore operating system with RJE, TP, MOP and batch users—we'll shortly be embarking on a new phase to VME/B using large mainframes in our continued growth, to provide service to our users.

These are not just jobs, but real career opportunities with salaries, relocation packages and other benefits to match—if you'd like to find out all the details please phone Ray Brown, our Operations Manager, on Oxford (0865) 778966 ext. 3293 or write for an application form to: Wendy Brown, Co-ordinator, Personnel Development, BL Systems Ltd., Data Centre PO. Box 5, Redditch, Worcs.

Look out, Einstein, you're next on the list...

Computer Professionals Come to South Africa on contract or permanent appointment

South Africa's mining industry is growing, and our client, a major Mining Corporation, is growing too. They need new skills for the technological applications of the 1980's.

Senior Technical Analyst/ Programmer

Up to £11,000 p.a. plus bonus

To be responsible for the design, programming, documentation and maintenance of a variety of technical computer systems, as well as advice on their use and application. Notably geo-statistical ore reserve systems, financial risk analysis and economic modelling, computer control of sophisticated analytical instrumentation and laboratory data flow as well as mining exploration and planning projects. Experience in any of the above would be a decided advantage, but it is essential to have had a minimum of 5 years' technical systems/programming experience in FORTRAN, preferably allied to a degree in Computer Science or Applied Mathematical Statistical Training.

Programmers

Up to £8,500 p.a. plus bonus

To be responsible for the production and maintenance of working programmes from written specifications according to established standards for a variety of commercial and technical applications in the mining industry. A minimum of 2 years' programming experience in COBOL and RPG II is essential, preferably allied with formal tertiary training in Computer Science and a knowledge of FORTRAN.

Available on contract or permanent basis, these positions offer a minimum of 8 1/2% annual bonus, free housing, relocation allowance and paid airfare for self and family, plus other benefits, including medical insurance. South Africa offers a change for the better, lower cost of living and taxation—the purchasing power of the Rand is approximately equal to that of the Pound and VAT is only 4%—good climate, excellent schooling, recreational and sporting facilities. The salary quoted is converted at £1 = R1.80 as at 21st April 1980. Interviews will be conducted in London and at other major centres. For a full discussion please contact Keith Robson on 01-439 3300 between 9 a.m. and 5 p.m. or write in complete confidence with full career details and a contact phone number to reach him before 27th June 1980 at Austin Knight Limited, London W1A 1DS, quoting reference TST.

Specialists since 1971 in UK and International computer appointments. We have many other jobs on our files and offer a career counselling service to computer professionals.

DOS/VS SPECIALIST

W. Germany

£Rewarding

A technical support division is being established to assist our clients with the expansion of their European Network. You must be capable of working with a minimum of supervision and be conversant with DOS software and JCL. Ideally you will also have TP network and/or RJE experience. Client interviews are to be held in London on July 1st.

To apply please telephone Karen Rizzello on 01-242 9356 or write to GOC Computer Personnel Ltd., 16 Bedford Row, London WC1 4EB quoting reference 108/CW.

(1504)

Graphics Software for Computer Aided Engineering

CAD Centre, Cambridge

As the acknowledged leaders in supplying consultancy services, software packages and computer aided engineering systems to industry, we can offer considerable scope to people joining us in this field of rapid growth. Having recently implemented a major expansion, we now have a number of key positions to fill in our teams

concerned with applications and support activities such as advanced computer graphics, data communications, database management systems and language processing.

We are particularly anxious to recruit individuals with experience in computer graphics.

Project Manager

You will guide projects through all their stages, so experience of client negotiations, specification and implementation is essential. You must have experience of real-time or micro-based development or production engineering applications. Previous supervisory experience is also necessary. (MJ/W 1679A)

GINO Development

We need Programmers to help us support and develop the GINO-F family of graphics products. These products are sold throughout the world and are implemented on almost every type of mainframe and mini-computer.

We are now producing micro-computer implementations and we are enhancing the product range to exploit raster displays. (HF/W 1679A)

Engineers & Programmers

This is an ideal opportunity for flexible, ambitious young Engineers and Programmers. We are particularly looking for people who are both, and have experience with N.C. software or graphics on Computer Automation or PDP-11 machines. You should have a degree and have either worked for a software house, production engineering department or on computer systems development in a manufacturing environment. (MJ/W 1679B)

Visualisation

Here we need Programmers who can help us produce our next generation of visualisation software. This will allow models and scenes to be assembled and manipulated interactively. From these models it will be possible to produce wire-line, hidden-line or hidden surface views in a variety of forms, e.g. line plots, half tone or full colour displays. (HF/W 1679B)

The CAD centre is a 150 strong, self-contained unit staffed by leading practitioners in the application of computers to design and manufacture. We use a wide range of mini-computers, mainframes and increasingly micros, both our own and our clients'. We enjoy the advantages of a small organisation with all the benefits of a large company. Cambridge and its surroundings offer urban or rural living and the facilities of a much larger town.

We pay good salaries to the right men and women, help with relocation and offer opportunities for rapid promotion. If you have the skills that we can use in this demanding business then phone Hugh Fingland or Maurice Jones on Cambridge (0223) 63125 quoting the appropriate reference, or write with a short cv. to Miss Pat Edwards, CAD Centre, Madingley Road, Cambridge CB3 0HB.

Computer Aided Design Centre

JBA

IDMS Technical Consultant

Belgium £24,000 - £30,000 p.a.

One of the most highly respected Consultancy organisations in the U.K. is currently running a major database development project in Belgium, for which a highly skilled Technical Consultant is now required to take on the DBA function. This is not a job which could be undertaken by a straight analyst, or even by a database designer, since in-depth knowledge of how a database is built is essential.

The appointee will receive a U.K. salary of up to £15K, plus living expenses of around £300 p.wk (tax-free) whilst in Belgium. The company would, in fact, like to see a branch office opened in Belgium in the medium term, so career advancement opportunities are extremely exciting. Contact: Andy Wright

FORTTRAN Analyst/Programmers

Holland stat c.Hfl 50,000 to Hfl 60,000

Opportunities are now coming to light for a couple of highly qualified, young Fortran programming specialists who have worked in a scientific/technical sphere for between two and four years, to join the Dutch branch of one of the U.K.'s most dynamic and successful Consultancies.

If you have this type of experience and wish to join a company which can open up your career prospects quite substantially, phone for an informal discussion. Contact: Andy Wright

Burroughs Large Systems Software Designers

Hants and Cheshire to £10,500

Our client is now recruiting for the initial design stage of a major command and control project which is scheduled for completion in two years. Software designers who can demonstrate several years design experience and have spent at least one of these years working with Burroughs Large Systems software including MCP, GEMCOS, NDL, DMS11. A thorough knowledge of COBOL and ALGOL programming languages will be necessary and candidates should be able to take over control of a small design team straight away. Excellent career opportunities with this high-level technical consultancy. Contact: Margaret Stevens

Designers - Industrial Systems

Berkshire c.£8,500

A large well-known manufacturer has opportunities for Systems Designers to work on the development of real-time industrial systems using mini and micro-computers. Applicants must have at least four years experience in design and programming of automation, military or process control systems and should be familiar with a real-time language such as CORAL or RTL/2. Salaries are negotiable according to experience. Large company benefits including an excellent relocation package. Contact: Jim Baker

Analyst Programmer

East London c.£8,000

This is an excellent opportunity for a move into management with a small Data Processing department at a manufacturing company servicing the catering industry, who are currently involved in installing a new NCR mini. Experience of NCR hardware is not essential as full training will be given, but a good appreciation of hardware, software and ancillary equipment, plus approximately 2 years working knowledge of COBOL or basic language is essential. Good organisation and man management skills with the ability to communicate at all levels, are of prime importance. Contact: Janet Chivers

Analyst/Programmer

Croydon c.£8,000

Our client, a large international organisation, has immediate vacancies for Analyst/Programmers to join the commercial sized development teams. Applicants should have at least three years' ANS COBOL programming experience on IBM equipment and have had some involvement with systems design, preferably in accounting, general commercial or database applications. This is an exciting opportunity to work on new IBM hardware with above average fringe benefits. Contact: Jim Baker

Programmer (BASIC+)

London c.£7,500

An exceptional opportunity for someone with at least one year of commercial experience using BASIC+ to join a medium sized distribution company. A Network of 12 PDP 11/70's is being installed throughout the UK and will run a comprehensive accounting and management information system. The position will initially involve working with a leading software house, developing the systems, but eventually the appointee will be based in new offices in North West London. Good prospects exist with the company and the successful candidate can expect to become an analyst/programmer in the immediate future. Contact: Janet Chivers

Recruitment

In Informatics

IBM Programmers

France: Salary to £15K + Benefits

A vast multinational organisation with offices throughout Europe and the USA has an urgent requirement for four Senior Programmers to work on their mid-range IBM 370 installation in an attractive area south of Paris. Suitable applicants should have developed and maintained an on-line, real-time system in preferably an IBM environment. Of particular interest will be

those who have written a data collection and interrogation system using CICS with DLI/I. However, those applicants with relevant experience using any other IBM compatible TP monitor should not be deterred from applying as training will be given to suitable candidates.

Ref: L/25/A

Datcomms Consultants

Manchester & H. Counties: To £12K

One of the world's leading mini-computer manufacturers has an urgent requirement for Data Communications Consultants. Candidates will be required to assess customer requirements for telecommunications equipment, mainly voice but also data and telex. As the client base covers much of Western Europe, knowledge of German or French is advantageous.

Of automated telephony systems and software is a prerequisite. Successful applicants will be expected to assess customer requirements for telecommunications equipment, mainly voice but also data and telex. As the client base covers much of Western Europe, knowledge of German or French is advantageous.

Ref: L/25/B

IBM & AMDAHL

Systems Engineers

German Speaking: Salary £20K + Benefits

A multi-national Company of US origin has retained LOGISTIX to recruit several IBM Systems Engineers and Programmers for its expanding German speaking operations based in both West Germany and Switzerland.

THE COMPANY: Our client, established in 1968, is an internationally renowned supplier of Data-Base and Teleprocessing systems. Today its operations are worldwide. THE PEOPLE: To support its rapid expansion in Western Europe, the Company is seeking Senior Systems Engineers and Software Programmers for recently created permanent positions. Technically, you must demonstrate continuous and current experience in the implementation and support of Data-Base and Teleprocessing systems. Ideally, all candidates should have had involvement in the installation of software, systems generation, benchmarking and testing. Personal skills such as the ability to liaise effectively at both managerial and departmental level are highly desirable. Project management experience together with varied exposure to pre-sales activities, e.g. customer presentations in the form of user seminars, tendering and product demonstrations will

reflect in the already generous salaries on offer. Particular hardware experience should ideally include multi-user or large-scale IBM, Amdata or other IBM compatible systems. It is a prerequisite to offer "hands-on" software with IMS/DB-DC, CICS/VS, MVS or with the DB or T.P. software of an independent supplier such as - TOTAL and ENVIRON; SHADOW; IDMS and RAMIS. In view of the senior nature of these positions only candidates with (at least) reasonable German language ability can be considered. THE BENEFITS: The higher than average salaries (even by Continental standards) reflect the prominence which our client places on the acquisition of these key personnel. Technical personnel receive a salary and other financial allowances commensurate with the Company's high expectations. Additional benefits include life and disability insurance and all employees participate in pension and medical plans. THE INTERVIEW: We will conduct preliminary interviews after which a Senior Company Representative will interview in either UK or Europe. TO APPLY: Please address all resumes and application forms under

Ref: L/25/C

Information Consultants

London: Salary to £14,000

Our client is a leading consultancy and communications product specialist, based in the centre of London. The rapid expansion within the market sector covering office automation and information science technology has led to an immediate requirement for additional Senior Consultants. Suitable applicants will be confident, well-presented and demonstrate the ability to lead project teams developing state-of-

the-art software in the areas of electronic mailing, text and word processing. You should have current or very recent involvement with Systems Network Architecture preferably using IBM software and hardware and those who have knowledge of at least one DBMS will be particularly favoured by our client.

Ref: L/25/D

COBOL Programmers

Central London: Salary £6,5-8K

Renowned Software Products and Consultancy Group is seeking COBOL Application Programmers to join a young and successful team working in Central London. Whilst our client has no preference for particular hardware experience, suitable candidates will most likely have current or recent knowledge of IBM, DEC, ICL or equipment. Database and/or on-line

skills will be especially welcome but those who can offer only batch involvement should not be deterred from applying. This is an excellent career opportunity for young, ambitious applicants to gain experience with a variety of hardware or indeed to move into totally new applications areas.

Great Expectations!

June's expecting to baby in October — congratulations June, sorry to lose you, which means that we're expecting to replace her with a first-class

SENIOR COMPUTER OPERATOR/ OPERATIONS MANAGER

The job would suit a man just as well as a woman, someone in their early 30s with the right training, personality and experience — we have a Burroughs 80 machine so familiarity breeds content!

Apart from operating the computer yourself and being in charge of one other operator, we'll expect you to have the maturity to run the department, co-ordinating the work, supervising the care of the equipment and keeping in touch with the manufacturers in order to be up to date on the latest developments of the system's software and hardware. You'll also help to select and train any operators we may have in the future, evaluating their performance and making sure they maintain a system log.

Our hours are 9-5 and our offices are very pleasant and comfortable — and just around the corner from South Kensington tube station in an attractive part of West London. As far as salary is concerned you'll have to help us figure that out yourself. But we guarantee you won't be disappointed.

If you're ready to use your operator skills and experience as a stepping stone to management, tell us about yourself. Write to Mrs G. Reed, American Community School, 5 Cromwell Place, London SW7 2JP, or telephone 01-881 0732.

Computer Operators and Trainees

Oil Industry

London

Marathon Oil U.K. Ltd., one of the most successful organisations engaged in the exploration of oil and gas both overseas and in the North Sea are seeking experienced Computer Operators. Currently one of our major projects is the development of the North Sea Brae Field, so considerable reliance is placed on our computer facilities — at the moment, these consist of Hewlett Packard and Datapoint mini computers though IBM 4300 series equipment is likely to be installed in London in 1981.

Our Datapoint installation is one of the largest of its type in the country, comprising Local Application Processors, VDU's, Graph Plotter, Digitizer, Remote Data Entry terminals and Data Communications terminals on line to our IBM 370/188s and Burroughs B6800s in the United States. We're looking for men and women with experience on minis or small/medium mainframe machines — particularly those we've mentioned — and to cope with growth, we're expanding our UK computer operations to 24 hour/7 day working.

Paul Wood, Marathon Oil U.K. Ltd.,
174 Marylebone Road, London NW1 5AT.
Tel: 01-486 0222.

We'll go into details of shift patterns when we meet you, but the system is specially designed to give plenty of weekend leave.

TRAINERS

We also require a limited number of trainee Computer Operators, ideally aged 18-22 and educated to 'O' level standard in scientific or practical subjects.

Salaries and benefits are of the standard you'd expect from a progressive company and you'll be based in London, at our Marylebone Road Headquarters. For further details, contact:

NEXT WEEK NORTHERN RECRUITMENT FEATURE

Advertisers are reminded that the next Computer Weekly Northern Recruitment Feature will be published on June 26 and will highlight career opportunities in the North.

Space reservations should be made as soon as possible to:

Owen Kelly — Manchester — 061-872 4211

Julia Hannaford — London — 01-261 8002

COMPUTER WEEKLY
THE INDUSTRY'S WIDEST READ AND MOST REQUESTED NEWSPAPER

DP MANAGER

CRAWLEY, SUSSEX
c. £10,000 p.a.

Unilock Partitions, a member of the Unilock Group of Companies and the leading European supplier of relocatable office partitions, is currently expanding its computer operations. An ICL 2903 is already well established and an advanced computer graphics system will be installed very shortly.

To assist in the operation of these systems and their further development, a DP Manager, who will report to the Computer Services Manager, is to be appointed. Applicants should be in the age range 25-35; have experience of Systems Analysis and Design and preferably a knowledge of Fortran IV or RPG II.

The successful candidate can look forward to earnings in excess of £10,000 per annum, together with participation in contributory pension and private medical schemes. If appropriate, relocation assistance will be provided.

Applicants should send CV with full personal and career details to:

John Davine
Computer Services Manager
UNILOCK PARTITIONS
Unilock Road, Crawley, West Sussex
BN1 1AH

University of Petroleum and Minerals Dhahran, Saudi Arabia

Our configuration consists of an IBM 3033 and an IBM 370/168 operating under VM/CMS-SPF, MUB/TSP-SPF and CICS with telecommunications/tele-processing networks. We now need the following:

SYSTEMS PROGRAMMERS

With a B.Sc. degree, 3-5 years experience and a knowledge of Assembler and PL/I. Experience gained in a higher educational environment would be an advantage.

PROGRAMMER/ANALYST-ACADEMIC/RESEARCH SUPPORT

With a B.Sc. degree of engineering or B.Sc. degree with Fortran and PL/I experience. A working knowledge of HSL/SPF or any of the following packages is desirable: CICS, DB2, ST/SQL, CMS, TSO, JCL, MVS, and others.

ADMIN. D.R. SUPPORT

With a B.Sc. degree and 3-5 years experience in business D.P. The work will involve systems development and maintenance using CICS and VSAM.

The University offers regular renewable 2 year contracts, tax free competitive salaries and allowances, plus air transport and from Dhahran for each 2 year contract. Housing in kind will be provided. If available, otherwise a cash allowance will be made for outside living. There are 45 days paid vacation and generous holidays.

Please apply as soon as possible with a detailed C.V. including home and office addresses and phone numbers to: University of Petroleum and Minerals, P.O. Box 813, Dhahran, Saudi Arabia. For further details, contact: Mr. A. T. Al-Jarrah, P.O. Box 813, Dhahran, Saudi Arabia.

AEROSPACE PROJECTS WEST GERMANY

Analyst Programmers/ Systems Programmers

DM 50,000 - DM 80,000

Science Systems Ltd., a systems house specialising in the scientific/technical areas of computing, are seeking to recruit a number of experienced personnel to work on advanced technology projects in West Germany.

Ideally candidates should possess a numerate degree and have had a minimum of two years programming experience in a real-time environment using FORTRAN and/or ASSEMBLER.

Exposure to any of the following hardware would be extremely advantageous.

SEL 32/70 series
MODCOMP 4/Classic
SIEMENS 330
UNIVAC 1100

HP 2100
ITT 3200
SIGMA 7/9

SIDA

Fortune tellers can give a fascinating insight into your future — but they can never give guarantees. However, our client in Surrey has a computer development programme which really is guaranteed.

It's currently based on a Univac 1100/81 which will be upgraded to an 82.

And a big development programme includes some Univac V77 minis plus around 100 user terminals and a superb new building.

It's all pretty exciting and it means that the DP staff team is going to have to develop along with the hardware.

At the moment they're seeking Analysts and Programmers who have had at least two years experience.

All positions offer really attractive salary/benefits packages with prospects for a bright future. And that's not star-gazing — that's a guaranteed commitment.

For full details just phone 01-546 6230 and speak to Jason Palmer or Theresa Fairs.

Or write to Bull Holmes Bartlett Ltd. (PT), 45 Albemarle Street, London W1X 3FE

WEST GLAMORGAN COUNTY COUNCIL
COUNTY ENGINEER &
SURVEYORS DEPARTMENT
**ASSISTANT
TECHNICAL
OFFICER
(COMPUTER)**
Ref. 8/19/08/009
Pembroke Buildings, Swansea

The opportunity exists for the right sort of person to assist in the support, maintenance and development of a wide variety of computer applications within the technical environment of the County Engineer's Department.

The successful applicant will also be required to help meet the challenge of the current transfer to a new range ICL 2980/2972 computer and the successful commissioning of an ICL 2901 VDU cluster as well as the continuing use of various vintage devices. The Department also owns an off-line drum plotter.

The person appointed will also be involved in user liaison and training. He/she will probably hold a degree or equivalent qualification in Civil Engineering, mathematics or computing, and proven experience in computer systems although not necessarily related to County Highway Department. A sound knowledge of FORTRAN is essential and previous experience of SEO II O/S would be a definite advantage. A professional qualification is preferable but not essential.

The commencing salary will be related to qualifications and experience. Salary: £5,628 to £9,087 per annum.

For application forms write to: The County Clerk, Central Personnel Unit, The Guildhall, Swansea, enclosing a large stamped addressed envelope. Closing date for the receipt of completed application forms: 30 July, 1980.

Sales Support -Data Communications

£8,000 + car

Data Logic is probably the fastest-growing systems group in the UK. Our Data Communications Division is looking for suitably qualified electronics people to provide vital sales and technical support to existing and potential users of our modems, multiplexers and network management systems.

This is an opportunity to become fully involved in the sales function including negotiation and presentation to prospects. You may be working at the moment in pre-sales support or field service engineering, or you may be running data communications networks on the user side. Whatever your background it is essential that you demonstrate the ability to keep pace within a marketing oriented group which aims to further improve on its 50% annual growth rate.

Applicants must be qualified to at least ONC level, preferably HNC or equivalent, in electronics engineering or a similar discipline. HM forces qualifications are also welcome. Full training will be given on Data Logic products.

Based at our Marylebone Road headquarters in London, you will operate throughout the UK with emphasis on the South East of England. The salary is supported by a wide range of benefits.

Write with full career details, or telephone for an application form, to: John H. Wilson, Personnel Department, Data Logic Limited, 29 Marylebone Road, London NW1. Tel: 01-486 7288.

A Raytheon Company

SYSTEMS ANALYSIS.

There's a growing shortage of experienced personnel within the computer industry.

And to help ease this shortage, the Manpower Services Commission, under TOPS, the Training Opportunities

Scheme, are sponsoring a fifteen week Systems Analysis course, starting September, 1980 at Bolton Institute of Technology.

WHAT DO YOU LEARN? Training covers systems analysis and design, basic statistics, business administration, accounts, computer theory and programming.

Successful completion of the course leads to the National Computer Centre Basic Certificate in Systems Analysis, which will equip you for employment as a Trainee Analyst/Programmer.

WOULD IT SUIT YOU? You should be aged between 25 and 35, and have a mature outlook, a logical mind and the ability to work in a highly technical environment. Previous experience of business or commerce would be advantageous.

You should have O'levels in English and Maths plus at least one A'level.

You will be required to attend a pre-course aptitude test and interview.

TOPS ALLOWANCES

All tuition is free and you'll receive a TOPS tax-free weekly allowance. Travel and/or lodging allowances may also be paid.

Find out more by sending the coupon to Lesley Harris, Manpower Services Commission Training Services Division, District Office, Churchgate House, Churchgate, Bolton.

I am interested in the Systems Analysis Course

EA Computing Services Association

R & D Systems Software Manager

N.London

c.£13000 + Cortina Ghia

Our client is a worldwide leader in the supply of advanced computerised systems to the colour printing and graphic arts industries. Current projects are multi-disciplined using state-of-the-art technology in minis, micros, lasers and complex optical systems. The company is seeking to appoint a suitably qualified candidate to this new staff management position.

Ideally you should have had experience in a position of responsibility in at least one software development project. You will be aware of the need for adequate standards and be capable of specifying those required. You will be required to advise and consult with existing engineering managers on development methodology and systems. You will also be capable of providing technical guidance to development programmers within the division.

Additionally, candidates who have DEC PDP11 experience, knowledge of microprocessors and experience in providing technical career planning/counselling would be advised to apply.

This is an excellent opportunity to contribute to an experienced management team at a significant level with the attraction of seeing the lessons of experience adopted in practice.

- a ground floor opportunity where you can make a substantial contribution,
- a dynamic growing company,
- the scope to develop our marketing and selling activities,
- a product of the 80s — minicomputers and commercial packages,
- location in South East England (Croydon based).

Sales Manager c.£15,000

We are a company providing the full range of computer services mainly in London and South East England. Our aim has always been to provide a professional service of high quality in all areas of activity.

We have recently started selling Data General minicomputers, with both general and industry specific packages. Our packages are written in COBOL and we are able to offer systems tailored precisely to our clients needs.

We are looking for an entrepreneurial minded salesperson who will make a major contribution to the development of our marketing and selling activities and the growth of our company.

You must be fully aware of the commercial real time minicomputer market and have a good appreciation of commercial systems.

An executive car will be provided. Similar opportunities also exist in Birmingham and Luton.

For further information please contact BRIAN BATHGATE as below or outside office hours on Oxted 4571.

Analyst/Programmer + ICL System Ten

Austin Knight is the UK's largest recruitment advertising agency with its headquarters in the West End of London, and a network of regional offices throughout the UK and overseas.
We operate two ICL System Ten's with a total of 110K of memory, 13 VDUs and 3 line printers. Applications include an on-line order processing system, accounting and management information systems. Further developments are planned which may include the addition of extra hardware to incorporate the regional network into the main system.
The successful man or woman will assist the D.P. Manager in all aspects of his work and deputise for him in his absence.
This is a genuine career opportunity for an Analyst/Programmer keen to broaden their experience in what is a particularly stimulating environment and who is now ready to accept further responsibility.
Applicants should have a sound background covering at least 3 years in systems design and programming, preferably in Assembler.
A competitive salary is offered together with an attractive range of benefits.
For further details telephone or write with career details to: Ron Westcott, D.P. Manager, Austin Knight Limited, London W1A 1DS. Tel: 01-437 9261.

ICL System 4/70 ENGINEERS

c £15K+2L Granada

Capitalise on your present experience whilst investing for the future

A unique opportunity has occurred for an experienced ICL 4/70 engineer to use his current knowledge whilst cross-training to both IBM and Amdahl's current mainframes.

If you are a Senior/Support level engineer well experienced on both the 4/70 and 4/72 our client can offer you a solid future.

Contact Peter Gorton or Howard Wynne on 01-637 9611 for details.

PDP ENGINEERS

experienced up to 11/70 or VAX

HERE IS AN OPPORTUNITY TO MOVE TO AN IMPORTANT MANAGEMENT POSITION

We have been retained to seek a capable and competent ENGINEER who possesses in-depth knowledge of the above systems and who now wishes to develop management skills.

We are looking for an individual capable of controlling a project and advising at senior management level. The right candidate will possess initiative and be able to apply his equipment and industry knowledge to this project management role.

The company is based in Hertfordshire and is part of a £100 million organisation; they are fast moving and offer a stimulating environment for an engineer to develop management skills.

A very generous remuneration package will reflect the importance of the position; a company car will be provided and full relocation expenses paid where appropriate.

For further discussion please call Howard Wynne immediately on 01-637 9611

Come and have a chat with us if you have experience in the word/text processing field or with a computer manufacturer and speak any European language. Contact Tony McGrath on 01-637 9611.

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

OPERATIONS CONTROLLER - £7,000 - 5th year

Part of this successful corporation's development is the manufacture and marketing of a new generation of super minis. An outstanding opportunity has arisen for an Operations Controller to maintain their in-house installation and liaise with software support and pre-sales divisions.

A smart, intelligent operations person (preferably from a mainframe background) can expect to move into operational or sales support areas.

For further details please contact Penny Stock on 01-240 1456 PS 11405/CW19/6/80 (1622)

TECHNICAL SUPPORT - ICL 2904 EXEC 2a - Hertfordshire - £5,750

An expanding company in Hertfordshire requires an operator who has the ability to write Macro's, correct JCL errors and restore files etc.

The installation runs under a three shift system at present but this will possibly be reduced to two. A starting salary of £5,750 can be expected along with the obvious career opportunity this particular position can offer.

Please telephone Sue Foulser on 01-240-1456 for further details SF 10753 CW 19-8-80

N.V. KENT - MVS/JCL WRITER - £6,500 + 5% Mortgage

A major finance Company will shortly be enhancing their operating system and are looking to recruit a JCL Writer with 3 years MVS & DOS experience.

3031 mainframe running under MVS/JES 2. Days only after initial period on shifts.

Tel. Sally Ann Bradley on 01-240-2441.

TWO OPERATORS - Any Hardware Background Generous Relocation Package - £5,500+

Tired of commuting? Two intelligent operators, with any hardware background, are required to work at a sophisticated installation in rural Cambridgeshire which operates a two shift system. Although you will be working within a relaxed atmosphere and with friendly people, your career prospects will not be ignored.

A generous relocation package is given to you together with the advantage of being able to buy brand new property for as little as £20,000.

For further details please ring Sue Foulser on 01-240-1456 SF10414 CW 19-8-80

SYSTEM 34 SUPERVISOR/OPERATOR - Central London - £8,000

A well qualified systems operator, preferably from a System 34 or 35 background, could look forward to some very exciting projects at our client's Central London based System 34 site.

The post is seen as an important operating position where you will also take responsibility for a small team of data prep. staff. Future plans include involvement in the establishment and smooth running of additional remote sites.

Age is irrelevant as long as you can demonstrate a real sense of maturity.

Please contact Key Stebbings on 01-240-1456 now for more details. KS 11404 CW 19-8-80

SALES PEOPLE £11-£17k + CAR

- ★ *career progression*
- ★ *innovation*
- ★ *financial rewards*

A major computer manufacturer known for its technological excellence throughout the world is continually increasing its sales force to market not only their existing products but also their new innovative ones that cover several fields: data processing, word processing, advanced business systems and scientific and technical.

If your background covers any of these areas our client would like to talk to you about your future within their organisation. Opportunities exist in the South East, Midlands, Manchester and the North and Scotland.

Naturally, comprehensive sales and product training courses are provided.

For a detailed discussion about this opportunity contact Robin de Rouen or Tony McGrath on 01-637 9611.

senior sales executives

— the outstanding opportunity of the 80s. In the fastest growing market sector of the computer industry

colour graphics

One of the leading manufacturers and distributors of COLOUR GRAPHIC DISPLAY TERMINALS and systems in the U.K., has asked us to identify and select two senior sales executives to fulfil vitally important positions in the South-East and the Midlands/North.

You will be responsible for the professional development of established major accounts and also for obtaining new business in a wide market sector as the products range from low cost graphic terminals to one of the most advanced systems available today.

Candidates should possess a demonstrable track record of sales success in the computer industry preferably in a technical/industrial applications area.

The remuneration package reflects the importance of these positions and will consist of a high basic salary, excellent "no ceiling" commission scheme, company car and, naturally, expenses.

Contact Tony McGrath on 01-637 9611.

*It won't
be all
plain
sailing!*

There'll be difficult times (every job has them)
there'll be challenging times (rare these days)
there'll be top rewards (now few and far between)
plus a camaraderie and a fine team spirit
(almost unheard of).

As one of our RECRUITMENT CONSULTANTS you will be involved in a hectic but exciting atmosphere. We're busy and thriving. Our Client list is impressive.

You need a flair for selling — a dp background, preferably in software — and the intention to be successful.

You'll find yourself in very good company.

Please ring Faye Ogilvie on 01-637 9611
and arrange a meeting.

Systems Programmer

New IBM 4331

Surrey

(Full Relocation)

SALARY NEGOTIABLE AROUND £11,000 P.A.

This is the key role in a small newly constructed team. There is no doubt that you will have an unusual opportunity to make a profound impact on the success of our Client's Data Processing development — working in the UK and Europe.

The integrated Data Processing policy now being implemented has resulted in a substantially increased commitment to computerised systems across a wide range of commercial and manufacturing control applications.

This heralds a new era in the Company's history which will commence with the implementation of an IBM 4331, with a UK communications network and data base facilities.

To fully utilise this technology, they seek a skilled

DOS SYSTEMS PROGRAMMER

Ideally you will have gained experience in a CICS and DL/I environment, although a knowledge of other DB and TP systems would be perfectly acceptable.

Following company systems/technical training in Sweden, you will have responsibility not only for software techniques and standards, but also for providing technical guidance to the Applications Teams.

To discuss this unusual opportunity further, contact Dave Scarlett on 01-935 0671 or evenings and weekends (before 9.00pm) 01-540 2500.

Analyst/Programmers

£6-£9,000

Put the sparkle back into your career

Since its formation in 1964, Computer Management Group has grown to become one of the largest Independent Computer Services organisations in Western Europe. This is because at CMG the accent has always been on 'total' customer service and on generously rewarding achievement. The Company has long been recognised as one of the industry's highest payers and offers considerable scope for a challenging career in all aspects of Data Processing.

Our services involve not only Consultancy and Software, but also purpose-built package systems that can be operated either on our clients' own computers or on CMG's.

The City of London subsidiary is now offering outstanding opportunities to young Programmers and Analysts. The work is stimulating, involves many different types of computers and languages and offers opportunities of working on many different types of financial systems.

Ideally you will be aged 21-25 and have 2-3 years experience in a user orientated environment. Just as important, you should be a good technician capable of enhancing the Company's excellent reputation.

All promotions are made from within the Company and these positions carry equal management potential. We offer excellent starting salaries which are commensurate with experience and ability PLUS the following benefits:

- ★ 21-26 days holiday
- ★ Non-contributory pension
- ★ Free BUPA
- ★ Relocation assistance
- ★ Profit sharing
- ★ Share purchase scheme
- ★ Non-contributory life assurance

If you'd like to find out more about what makes CMG so special, please telephone Cliff Kentish on 01-481 3881 or send the coupon below to him at—

CMG (City of London) Ltd.,
Eastgate, 73 Leman Street,
London E1 8EY.

COMPUTER ENGINEERS

to £9K+car

Field Service Engineers, fed up with sitting in traffic jams all day? Here is a chance to move indoors and still keep that company car!

One of the world's leading computer manufacturers is offering the opportunity to engineers to work on their superior large mainframes and industry standard peripherals.

With one of the most effective training schemes available today, you will quickly learn their systems and join a team at one of their prestigious sites in LONDON.

Recent expansion has created vacancies for Senior and Junior level engineers. As a **senior engineer** you will already have a minimum of three years' computer experience, preferably on large mainframes. As a **junior engineer** you will have determination and proven aptitude within a relevant background.

If you're good, salaries to £9K + CAR
So call Howard Wynne on 01-637 9611

are you a young graduate computer engineer looking for an opportunity to develop your career in high technology with one of the leading companies in the industry

As a senior project engineer you will assume full responsibility for design, engineering, implementation and commissioning of sophisticated computer systems. Liaison with clients around the U.K. and overseas will introduce interesting travel opportunities.

You will be working in a dynamic friendly environment and will be provided with all the training and support needed to develop rapidly.

These positions will require a *degree or equivalent* with at least one year's digital/mini experience. An appreciation of systems software would be an additional asset.

Salaries will be attractive with the usual large company benefits, including generous re-location assistance to HERTFORDSHIRE if appropriate.

If you are looking to develop your career call Howard Wynne on 01-637-9611 Today!

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT &
EXECUTIVE SELECTION

A rare opportunity for a dedicated Field Service Engineer to join a truly progressive and highly successful organisation.

In Europe we have experienced a tremendous amount of success in marketing communications products and services, and our Hertfordshire based operation has had particular responsibility for such areas as: Voice Communications, Record Communications and Data Communications.

Within the Technical Support Group we have created an exceptional opening for a first class Field Service Engineer to become our:-

Hardware Specialist

(Mini Computers and Data Communications)

South Herts.

c. £8,500 plus car

In addition to your sound hardware knowledge in the areas of mini computers/data communications, you will be expected to demonstrate experience of software, installation, commissioning and problem solving.

The successful applicant will be offered the opportunity of product training overseas, and will be expected to travel throughout the world on troubleshooting assignments as and when necessary.

This position certainly represents a challenge to a career minded individual, and we are confident that the job content and personal growth prospects are second-to-none.

For a confidential discussion regarding this key position, contact our Advising Consultant Andy Carter on 01-935 0671 (24 hour answering service).

MANAGEMENT &
EXECUTIVE SELECTION

Time waits for no man

Things happen faster in the computer world than in any other - being in the right place at the right time is the only way to keep on top of that world as a programmer.

Right now, there's no better place than Data Logic's Professional Services Division. As one of Britain's leading groups of software specialists, we can put you into the forefront of DP in industry and commerce, the public and private sectors - programming for the most advanced new systems, the most sophisticated and complex configurations. You'll get the chance to use the latest techniques and languages - even develop your own. And you won't be tied to any one make of equipment, or any particular type of application, as you would be working with a manufacturer or user.

You'll earn between £6,000-£10,000 depending on your experience, plus profit share and travel expenses - you must be prepared to spend much of your time on customer sites, from a Greenford base.

Either write with full career details, or telephone for further information to: Barbara Hawkins, Personnel Department, Data Logic Limited, Westway House, 320 Ruislip Road East, Greenford, Middlesex UB6 9BH. Tel: 01-578 9111. Alternatively, telephone our 24 hour answering service on 01-235 1535 for an application form.

Unusual chance for SYSTEMS ANALYSTS

who want to do something more
advanced than payrolls and
accounting routines
CENTRAL LONDON
£7,500 to £10,000

We are recruiting for clients, a major mainframe installation with satellite minis, who have an extensive schedule of development work, principally involving databases, communications and on-line techniques. The work is likely to be more interesting and challenging than in most analysis jobs.

Our clients have a good training budget, and career prospects and employment conditions are very sound. Most of the analysis work is related to the mainframe, but opportunities to work on minis will arise, and analysts with either mainframe or mini experience are invited to apply.

Due to the volume of development work, we are recruiting at several levels; the minimum experience requirement being two years' analysis or one year's analysis plus two years' programming.

Please ring us in confidence for an initial talk, quoting ref. 672, or leave a message on our answering machine after hours and we will contact you.

SCIENTIFIC PROGRAMMER for COMPUTER AIDED DESIGN

Mullard Southampton is a leader in the dynamic world of the silicon chip; we design, develop and manufacture MOS integrated circuits.

One of our key areas is the Computer Aided Design activity which is essential in the design of integrated circuits.

We now offer you the opportunity to join us at the forefront of the micro-electronics world - we need someone (male or female), with programming knowledge and experience in a scientific application, preferably Fortran or Algol, to join our CAD team. The work is varied - ranging from creating systems to programming on dedicated computers - 128K word SEL 32/65 computers with Tektronix graphics.

You will probably have a degree in a relevant scientific subject with an appreciation of electronics and be able to demonstrate to us a practical aptitude in using computers.

Salary will depend on the experience you can offer us and there are excellent fringe benefits. Including generous relocation expenses where necessary.

Please write with details of your qualifications, experience and current salary to: John Wells, Personnel Officer, Mullard Southampton, Millbrook Industrial Estate, Southampton SO9 7SH. Or telephone Southampton (0703) 775533.

THE SALES BIT

What makes people tick

OFTEN an order can be lost owing to the buyer apparently acting in an irrational manner. The salesman is confounded. "Why on earth did he do that? I don't understand it."

Every angle was considered, all the possibilities explored, the alternatives analysed in a logical manner, yet the buyer chose not only some other product, but one which was clearly not the best for the job.

Had the job of selection been his, the salesman would certainly not have made the same choice, even to the exclusion of his own product - so who can blame him for losing the order?

This kind of situation is more common than one might initially think, but rather than being an irrational act on the part of the buyer is often an error of judgment by the salesman.

When you think about it, such unexpected behaviour confronts us all from time to time, sometimes in a business environment, but often within the social context. You create a strategy or make an approach based on what you consider to be the likely reaction, and suddenly you are shocked, horrified, distressed, disappointed, perplexed or even annoyed, to discover that your ideas are rejected in preference to an alternative which is so clearly inappropriate, inadequate, inferior, unsuitable, impractical, too expensive, self-indulgent or even stupid.

Yet the fact remains, you have been rejected, the decision has been made against you and it's difficult to get it reversed (but not impossible).

So why do people often appear to act in such an inconsistent and illogical way? The answer is that they usually don't - at least not from their own point of view!

One of the big mistakes we all make in life is to expect, consciously and subconsciously, other people to work to the same set of rules as ourselves; that their thoughts and reactions in a given situation will be the same as our own. What we may consider to be a minor and transient phenomenon can have an impact upon others which is both profound and permanent.

On the other hand, our own momentous and unsolvable problems may be seen by others as trivial.

THE user's view of message switching systems. In private communications networks is given in a new publication from ITT Business Systems explaining the economics of such systems.

Spokesmen from four companies of different sizes and operating in unrelated fields comment on the economic benefits of message switching within their own organisations. Copies of the publication are available from Publicity Department, ITT Business Systems, Lion Buildings, Crowhurst Road, Hollingbury, Brighton.

New company
A NEW company, Advanced Media, has been formed to market floppy discs, disc packs, magnetic tape, ribbons and other computer peripherals. The address is Unit H, St Anthony's Way, Fiddlers Wood, Farnham, Surrey, GU14 0NH. Tel: 01-751 2108.

Going to town
MOVING into town from High Wycombe, MGE Management Services is now located at 111 Wardour Street, London, W1. The new telephone number is 01-400 8077.

On the move
AS a result of the continued expansion of its services to engineers and designers, Fraser Nash (Consultancy) has moved to larger premises at River Gardens, 4 Lower Teddington Road, Hampton Wick, Kingston upon Thames, Surrey, KT1 4ER. Telephone: 01-842 2301.

Puzzle Answer

THIS little venture serves to illustrate various "properties" that every square must have. Set out in brief, these requirements are: (1) No square can end in 2, 3, 7 or 8; (2) All squares have a digital root of 1, 4, 7 or 9; (3) No number of the form 3n + 2 can be a square; (4) If the last digit of a square is 5, then the figure 2 must precede it; (5) No square can be made up entirely from odd digits; (6) If a square ends in 6, the preceding figure is always odd; (7) No number given, only the sixth does not fit in with any one of these rules - and it is in fact the square of 50,123,240.

the industry. An excellent benefit package is
also offered.

Further details and application forms
from the Deputy Administrator, Oxford
Polytechnic, Headington, Oxford OX3
9BQ. (1688)

Great Expectations!

June's expecting a baby in October - congratulations June, sorry to lose you which means that we're expecting to replace her with a first-class

SENIOR COMPUTER OPERATOR/ OPERATIONS MANAGER

The job would suit a man just as well as a woman; someone in their early 30s with the right training, personality and experience - we have a Burroughs 80 machine so familiarity breeds content!

Apart from operating the computer yourself and being in charge of one other operator, we'll expect you to have the maturity to run the department; co-ordinating the work, supervising the care of the equipment and keeping in touch with the manufacturer in order to be up to date on the latest developments of the system's software and hardware. You'll also help to select and train any operators we may hire in the future, evaluating their performance and making sure they maintain a system log.

Our hours are 9-5 and our offices are very pleasant and comfortable - and just around the corner from South Kensington tube station in an attractive part of West London. As far as salary is concerned you'll have to help us figure that out yourself. But we guarantee you won't be disappointed.

If you're ready to use your operator skills and experience as a stepping stone to management, tell us about yourself. Write to Mrs. O. Reed, American Community School, 8 Cromwell Place, London SW7 2JP, or telephone 01-881 0722.

Senior Auditor Computer Systems Approv.

WEST COUNTRY up to £9K

The attractive city of Bath - with fast access to some of the finest leisure and sporting areas - this could be your environment working for South West Gas. This position will enable you to sharpen your professional skills on a sophisticated computing installation handling over 70,000 customers, 12,000 stock items and 5,000 personnel records as well as very many other application areas.

As a Senior Auditor in our DP team we will expect you to bring home with accounting practice - but more important is three years computer experience, including the writing and testing of programmes.

You will probably be a graduate who has worked on high volume processing. Career prospects within the Region gas industry cannot be less than first class, for the right person. Salary will be in the range of £8374 to £9586, plus the bonus normally associated with a large progressive organisation. These include an excellent sick pay and pension scheme, 11 appropriate cases, financial assistance in relocation to the Area office.

A vacancy for an Auditor has also arisen and applications invited from those with computer experience. The salary for this post is £6275 to £7349.

If you wish to discuss the responsibilities of these posts please telephone Mr. David Evans, Assistant Audit Manager (0275) 6141, or request an application form from The Personnel Officer (Administration), South West Gas, Riverside, Temple Street, Keynsham, Bristol BS18 1EQ, Tel. (02754) 61717.
